

OM 611UQC

6 DIGIT PROGRAMMABLE

IMPULSE COUNTER
FREQUENCY-/PHASE-/PERIOD-METER

SAFETY INSTRUCTIONS

Please, read the enclosed safety instructions carefully and observe them!
These instruments should be safeguarded by isolated or common fuses (breakers)!
For safety information the EN 61 010-1 + A2 standard must be observed.
This instrument is not explosion-safe!

TECHNICAL DATA

Measuring instruments of the OM 611 series conform to European regulation 89/336/EWG and Ordinance 168/1997 Coll.

They are up to the following European standards:

EN 55 022, class B

EN 61000-4-2, -4, -5, -6, -8, -9, -10, -11

The instruments are applicable for unlimited use in agricultural and industrial areas.

CONNECTION

Power supply from the main line has to be isolated from the measuring leads.

ORBIT MERRET, spol. s r.o.

Vodnanská 675/30 198 00 Prague 9 Czech Republic

2. INSTRUMENT DESCRIPTION

DESCRIPTION

The OM 611UQC model is a universal 6 digit programmable panel impulse counter/frequency meter/repeat. The instrument is based on an 8-bit microprocessor, that secures high accuracy, stability and easy operation of the instrument.

Measuring modes

SINGLE Single-channel counter/frequency meter/phase/repeat
UP/DW Single-channel UP/DW counter/frequency meter
DUAL Double-channel counter/frequency meter
QVADR Counter/frequency meter for IRC sensors

Programmable display projection

Calibration calibration coefficient may be set in "CM" independently for every channel

Projection -99999...999999 with fixed or floating DP

Measuring channels A and B, two independent functions may be evaluated from each input

Time base: 0,05/0,5/1/2/5/10/20/50 s

Digital filters

Input filter: the instrument allows to filter the input signal and thus suppress undesirable interfering

signals (e.g. relay back-swings). The set parameter indicates maximum possible measured

frequency, that the instrument will process, 10 Hz...2 kHz

Exponential average from 2...100 measurements n-th value from 2...100 measurements Radius of insensitiveness adjustable in digits

Functions

Preset initial non-zero value which is read always after instrument resetting

Summation registration of the number upon shift operation

Interface constant increases calibration constant 1/10/60/100/1000/3600 Min/max. value registration of min./max. value reached during measurement

Tare assigned to reset the display upon non-zero input signal

Top value only max. (min.) value is displayed
Rounding setting the projection step for the display

Mathem. operation between inputs A a B, A+B, A-B, A*B, A/B, (A-B)/B, Polynome, 1/x, Logarithm, Exponnen-

tial, Power, Radical

External control

Hold display/instrument/menu access locking

Lock control keys locking

Blocking the "CM" blocking the access into Configuration menu

Tare resetting tare to zero

Resetting MV resetting min/max value to zero

OPERATION

The instrument is set and controlled by five control keys located on the front panel. All programmable settings of the instrument are realised in two adjusting modes:

Configuration menu (hereinafter referred to as "CM") is protected by an optional numeric code and contains

complete instrument setting

User menu may contain arbitrary programming setting defined in CM with another selective restriction

(see, change)

All programmable parameters are stored in the EEPROM memory (they hold even after the instrument is switched off).

The measured units may be projected on the display.

EXTENSION

Comparators are assigned to control one, two, three or four limit values with relay output. The limits have adjustable hysteresis within full display range, as well as selectable delay of the switch-on within the range 0...99,9 s. Reaching the preset limits is signalled by LED and simultaneously by the switch-on of the relevant relay.

Excitation is suitable for feeding of sensors and converters. It has a galvanic isolation with continuously adjustable value in the range of 2...9/9...12/15...24 VDC

Data outputs are for their rate and accuracy suitable for transmission of measured data for further projection or directly into the control systems. We offer isolated RS232 and RS485 with the DIN-MessBus /ASCII protocols.

Analog outputs will find their place in applications where further evaluating or processing of measured data in external devices is required. We offer universal analog output with the option of selection of the output type -voltage/current. The analog output value corresponds with the displayed data and its type and range are selectable in the programming mode.

Real time is an internal time control of data collection. It is suitable everywhere where it is necessary to register measured values in a given time segment. Up to 65 000 values may be stored in the instrument's memory. Data transmission into PC via serial interface RS232/485

FIRMWARE

www.orbit.merret.cz/update

Considering the continuous development and innovation of our products it is now possible to download the most recent versions of the program for all instruments. Because program upgrade is performed via RS 232 data line it is of course necessary that the instrument be equipped with this interface as well.

The upgrade and the program setup is performed automatically after the instrument is connected to a PC. After it is completed all customer settings of the instrument are replaced by manufacturer's setting, i.e. repeated item setting is required.

Number of the current program version in your instrument you can find in the "Configuration menu - service - identification"

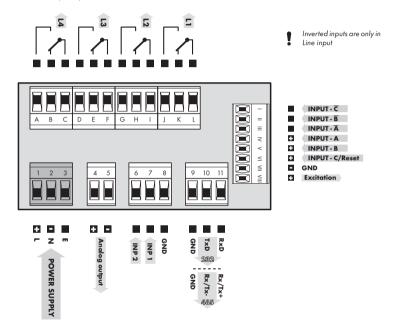

The function for recording the new Firmware is supported in all instruments from version 004

3. CONNECTION

The supply lead for feeding the instrument should not be in the proximity of low-potential signals.

Contactors, motors with larger input and other efficient elements should not be in the proximity of the instrument. The lead into the instrument input (the measured quantity) should be in sufficient distance from all power leads and appliances. Provided this cannot be secured, it is necessary to use shielded leads with connection to ground.

The instruments are tested in compliance with standards for use in industrial area, yet, we recommend to abide by the above mentioned principles.

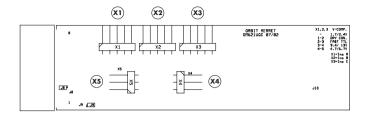

AUXILIARY INPUT

Grounding on terminal "E" must be connected at all times

Input	Function	Description	Control	
	Hold	Blocking the instrument (adjustable in menu)	upon contact agst. GND (no.8)	
Lock Keyboard bloc		Keyboard blocking	upon contact agst. GND (no. 8)	
INP 1 INP 2	Tare	Tare activation	upon contact agst. GND (no. 8)	
IINF Z	Lock C.M.	Locking the access into Configuration menu	upon contact agst. GND (no. 8)	
	Resetting MM	Resetting min/max or top value	upon contact agst. GND (no. 8)	

3.1 CONFIGURATION OF THE JUMPERS

Setting the comparator levels

X1 - Input A, divider X4 - Amplyfing input A

X2 - Input B, divider X5 - Amplyfing input B

X3 - Input C, divider

Jumper	Jumper	Туре	Input voltage	Comparator levels		Input
X4, X5	X4, X5 X1, X2, X3		inpor voilage	L>H	H>L	
1 - 2	1 - 2	NPN, Contact	xxx	1,7 V	2,4 V	
1 - 2	bez	TTL (PNP)	2,5 - 5 V	1,7 V	2,4 V	2
1 - 2	2 - 3	Fast TTL	2,5 - 5 V	1,7 V	2,4 V	Standard
1 - 2	3 - 4	PNP	10 - 60 V	9,4 V	13,0 V	Ş
1 - 2	4 - 5	PNP	5 - 10 V	4,7 V	6,7 V	
2 - 3	1 - 2	Do not connect				
2 - 3	without	Do not connect				È
2 - 3	2 - 3	< 5 V	25 - 50 mV	17 mV	24 mV	100
2 - 3	3 - 4	< 5 V	0,1 - 2,5 V	94 mV	130 mV	~
2 - 3	4 - 5	< 5 V	50 - 100 mV	47 mV	67 mV	

For each jumper setting disconnect the instrument from the net

Relay parameters specified in the technical data apply for resistance load. Upon connection of the induction load we recommend to fit the leads to relay 1 A with a fuse for maximum load protection.

INSTRUMENT SETTING

The instrument is set and controlled by 5 control keys located on the front panel. By means of these control keys it is possible to browse through the operating program, to select and set the required values.

CONFIGURATION MODE

- designated for professional service and maintenance
- · complete instrument setting
- · access is password protected
- authorization for "User mode"

USER MODE

- · designated for instrument service
- · may contain setting the limits, analog and data output and brightness, with restriction as per the setting in "Configuration mode"

SYMBOLS USED IN THE INSTRUCTIONS

So marked items are preset from manufacture and will always be preset after "Return to manucture setting"

Indicates the setting for given type of instrument

SETTING THE DECIMAL POINT AND THE MINUS SIGN

DECIMAL POINT

Upon modification of the edited number in the menu the decimal point is set by key with transition beyond the highest decade, when the decimal point starts flashing. Positioning is performed by and confirmation by with return into number editing.

Decimal point for display projection is set in item "CHAN. A - FORMAT" and "CHAN. B - FORMAT" by selection from preset values.

MINUS SIGN

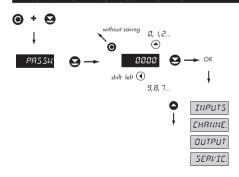

Setting the minus sign is performed on the highest valid degree by key \bigcirc . The minus sign is in numeric row (0, 1, 2, 3...9, -).

Setting

- ⇒after transition beyond the highest decade **①** the decimal point starts flashing
- ⇒ by pressing **a** you will place the DP and you confirm it by **a**

ACCESS INTO THE CONFIGURATION MODE

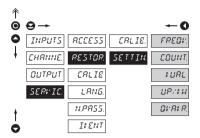

The code is always preset from manufacture to 0000. In case of loss of access password it is possible to use universal access code "8177"

4.1 MINIMUM INSTRUMENT SETTING

All settings are performed in the "Configuration menu"

Presetting values in the menu

- reading the manufacture calibration and basic setting of items in the menu (DEF) FREGY Manufacture setting for Frequency measurement COUNT. Manufacture setting for "DUAL" Manufacture setting for "DUAL"

brightness

4.3 CONFIGURATION MENU

- · designated for professional service and maintenance
- · complete instrument setting
- · the access is password protected
- authorization for "User mode"

CONFIGURATION MODE - INPUTS 4.3.1

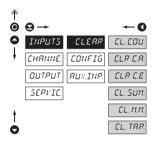

Here the basic instrument parameters are set

Resetting the internal CLERR values

Basic instrument settina CONFIG

Setting the "Hold" function RUX.INP.

RESETTING INTERNAL VALUES 4.3.1.1

Resetting internal values CLERR of the instrument

Resetting both counters CL. COU.

- upon resetting, the value will be added to the total sum (accumulated value) in the internal memory of the instrument (only for input A)

Resetting the counter ELR. C.R. (input A)

- upon resetting, the value will be added to the total sum (accumulated value) in the internal memory of the instrument

Resetting the counter ELR E.E. (input B) Resetting the total

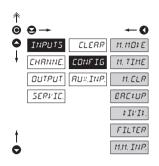

CL. SUM.

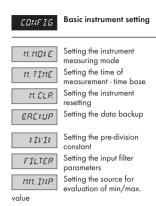

- summation serves for cumulative sums of values (e.g. shift operation), when after resetting the counter the display value is added to total sum

Resetting minimum and CL. M.M. maximum measuring value

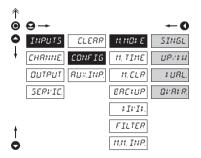

Tare resetting CL. TRR.

4.3.1.2 INSTRUMENT CONFIGURATION

4.3.1.2.1 SETTING THE MEASURING MODE

Setting the measuring mode of the instrument

5INGL Single impulse counter/ frequency meter

 measures at input A and may display numbers/frequency (phase/repeat)

UP/DW impulse counter/ frequency meter

 measures at inputs A, B (direction) and may display numbers/frequency

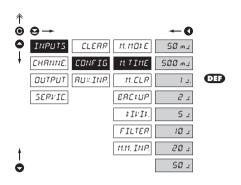

Dual impulse counter/
frequency meter

 measures at two inputs and may display numbers/frequency

GURRI. Impulse counter/frequency meter for IRC sensors

- measures at two inputs A+B and may display numbers/frequency
- in this regime both edges of signals A and B are taken into account

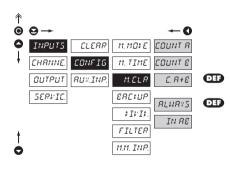

4.3.1.2.2 SETTING THE TIME OF MEASUREMENT/TIME BASE

M. TIME Setting the time of measurement - time base

- if you set the time of measurement for example to 1 s, the measuring time is approximately from 1 s to 2 s (1 s + maximum one period of measured signal). If no impulse comes within 2 s, it is understood that the signal has zero frequency.
- for DUAL regime the time of measurement is exactly defined
- range of the setting of the time base is 50 ms to 50 s
- in the "RTC" regime with projection of date the set time determines the period of switching between time/date, min. is 5 s, the date is displayed for approximately 2.5 s

4.3.1.2.3 SETTING THE ZEROIZING INPUT

- setting zeroizing input (input C) and key with assigned resetting function Dual counter EDUNT. R Resets Channel A

Resets Channel B

Resets both Channel

Counter for IRC sensors

COUNT. 8

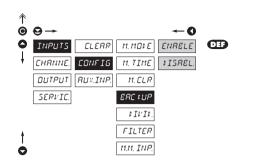

C. R+8

RESETS always IN RESETS only if input A and B in log 1

A and B

OH)

4.3.1.2.4 SETTING THE DISPLAY STATUS BACK-UP

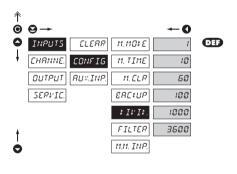

Setting the display status back-up

 setting the renewal of the displayed value after power supply failure or switch-off of the instrument

The instrument will read the display status from memory

The instrument will reset itself to zero after switch-on

4.3.1.2.5 SETTING THE PRE-DIVISION CONSTANT

Setting the pre-division constant

- the pre-division constant serves to enlarge the calibration constant range

Pre-division constant = 1

Pre-division constant = 10

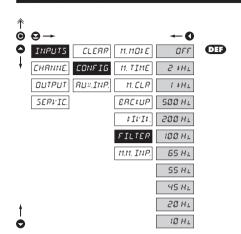

Pre-division constant =60

Pre-division constant = 100

Pre-division constant = 1000

Pre-division constant =3600

4.3.1.2.6 SETTING THE INPUT FILTER PARAMETERS

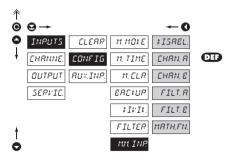

FILTER Setting the digital input

 through the digital filter we may suppress undesirable interfering impulses (e.g. relay back-swings) on the input signal. The set parameter indicates the maximum possible instrument frequency, which the instrument processes without restriction

When entering the contact and well known maximum input frequency we recommend to use the filter

4.3.1.2.7 SETTING THE INPUT FILTER PARAMETERS

Setting the input "quantity" for evaluation of the min/max. value

Min/max value is switched-off

EHRN R From Channel A value

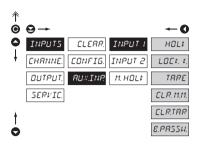

EHRN. E From Channel B value

FILT. R From filtered value of Channel A

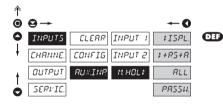

FILT. E From filtered value of Channel B

MRTH.FN. From mathematic function

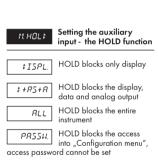

4.3.1.3 SETTING THE AUXILIARY INPUT

Setting the functions for Inputs 1 and 2 is the same

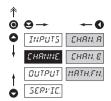

Assigning functions to INPUT auxiliary inputs Activation of the "Hold" HOLD function Activation of the function LOCK. K. "Keyboard blocking" Activation of the "Tare" TRRE function Activation of the function ELR.M.M. "Resettina min/max value" Activation of the function CLR. TRR. "Tare resetting" Activation of the function B.PRSSN. "Blockina access into Configuration menu"

When entering the contact and well known maximum input frequency we recommend to use the filter

4.3.2 CONFIGURATION MODE - CHANNELS

Here the basic parameters of the instrument input values are set

CHRN, R

Setting the parameters and range of the meas. channel

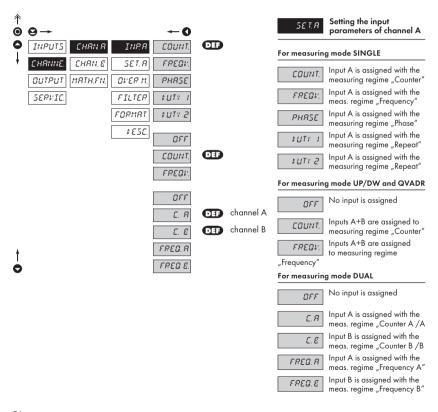

CHRN. 8

Setting the parameters and range of the meas, channel

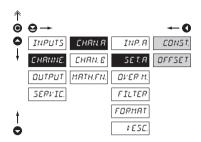

MRTH,FN,

Setting the instrument

4.3.2.1.1 SETTING THE MEASURING "CHANNEL A"

4.3.2.1.2 SETTING THE "CHANNEL A" PARAMETERS

EBN57... Calibration constant

- calibration constant is for the conversion of input value to required display value
- if the calibration constant range is insufficient it may be enlarged by setting the pre-division constant (Configuration menu)
- by setting a minus value the direction of counting is changed, i.e. we count down
- range: -0,00001...999999

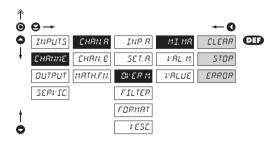

OFFSET Additive constant,

- shift of the beginning of the measurement by a set value which will always be read upon instrument resetting
- range: -99999...999999
- DHF = 0

In the menu "OUTPUT > DISP. > SETTIN > MENU it possible to set direct access (button (1)) in to item editing

4.3.2.1.3 FUNCTIONS UPON READING THE DISPLAY/VALUE

The instrument is automatically set to zero and counts on

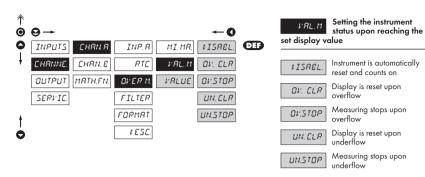

570P The measuring stops

 the display continues showing the max. resp. min. projectable value

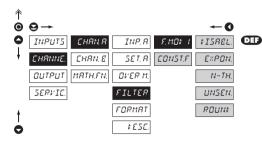

ERROR Measuring stops

 the display shows error statements "E.UND." or "E.OVER."

4.3.2.1.4 EXTENDED FUNCTION UPON EXCEEDING THE SET DISPLAY VALUE

4.3.2.1.5 SETTING THE DIGITAL FILTERS

FITER 1 Setting the digital filters

Above referred-to functions apply for the

Display value after

evaluation "VAL. M."

value set in menu "VALUE"

VALUE

 into the filter enter values adjusted from "SET. A"

CONSE.F Setting the filtration constants

this menu is displayed always after selection of particular type of filter

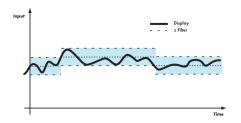

*ISREL. Filters are turned off

Selection of exponential filter

 value is calculated from a number of measurements selected in "CONST. F"

N-TH Selection of n-th value

- this filter allows to leave out n-1 values and for further projection use every n-th measured value
- range 2...100 measurements

UNSEN.

Setting the band of insensitiveness

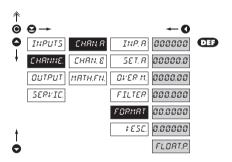

- this filter allows to stabilize the resultant value. The previous value is taken as the measuring result, if the measured value is not larger than the previous + P or smaller then the previous P. The value "±P" defines the band of insensitiveness in which the measured value can be changed without the change having any impact on the result change of data on the display.
- range 0,00001...100 000

ROUNE

Rounding of the measured value

- it is set by an optional number which determines the projection step (e.g. step 2,5 - 0, 2.5, 5, 7.5, etc.)

4.3.2.1.6 PROJECTION FORMAT

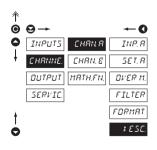

FORMAT

Setting the projection format for Channel A

 the instrument enables projection of a number with decimal positioning of the decimal point and projection with floating point, which allows projection of numbers in the most precise form "FLOAT. P."

4.3.2.1.7 SETTING THE MEASURING UNITS DESCRIPTION

Setting projection of the measuring units on the display for Channel A

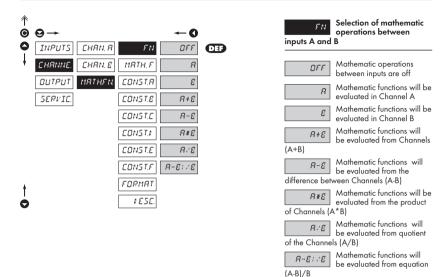

- the instrument allows to add two description symbols to classical numeric formats (at the expense of number of displayed positions). Setting is performed with the aid of shifted ASCII code. Upon the setting the first two positions show the given symbols and the last two the code of the relevant symbol from 0 to 9.5

Description is cancelled by entering 00

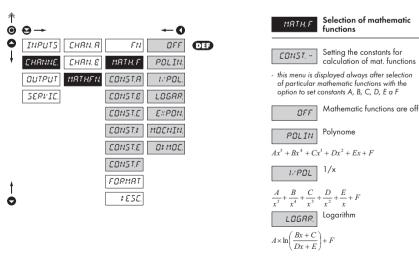

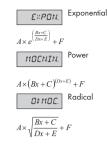

Description can not be set upon projection of 4 or 5 decimal places

4.3.2.2.1 MATHEMATIC OPERATIONS BETWEEN THE INPUTS

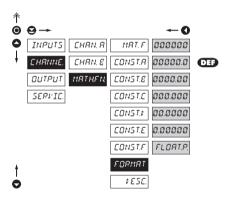

4.3.2.2.2 MATHEMATIC FUNCTIONS

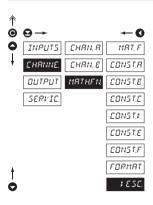

4.3.2.2.3 MATHEMATIC FUNCTIONS - PROJECTION FORMAT

 the instrument enables classic projection of a number with positioning of the decimal point (00000/0000,0/.../0,00000) and projection with floating point, which allows projection of numbers in its most precise form "FLOAT. P.

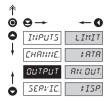

4.3.2.2.4 MATHEMATIC FUNCTIONS - DESCRIPTION ON DISPLAY

Setting the measuring units on the display upon the projection of mathematic functions

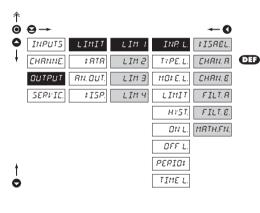

- in this menu we set independent projection of the symbol of mathematic function, which is independent on projection of description of the measured quantity and is projected only with given function
- setting is the same as description of measured unit "Channels CHAN. A DESC."

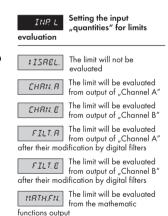

4.3.3 CONFIGURATION MODE - OUTPUT

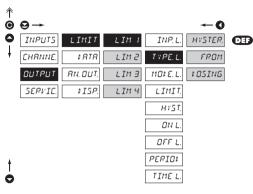

LIMII Setting the functions and type of limits switch-on Setting the type and parameters of data output Setting the type and parameters of analog output sispen and temporary projection on display and adding another projection of internal data on arbitrary keys of instrument

4.3.3.1.1 LIMITS - SETTING DATA FOR EVALUATION

4.3.3.1.2 LIMITS - SETTING THE TYPE OF LIMITS

Setting the type of limits

The limit has a boundary. HYSTER hysteresis and delay

- for this regime we set the parameters "LIMIT", at which the limit shall react and is adjustable in full range of the display, "HYST." is an auxiliary parameter preventing the vibration at unsteady value and is adjustable only in plus values. The limit parameter is "TIME L." determining the delay of relay switch-on from exceeding the set boundary in range 0.0. 99.9 s

ERAM

TYPE.L

The limit is in the switch-on regime "from - to"

- for this regime we set parameters "ON L." and "OFF L." adjustable in full range of the display between which the limit shall be switched on

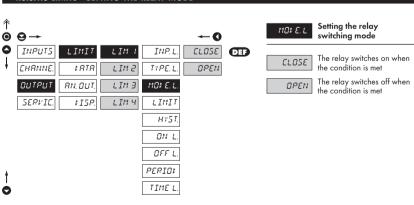

₽ OSING

The limit is in the regime "dosing"

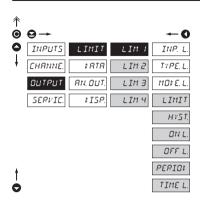

- in this regime we set two parameters "PERIOD" in full range, determining at which value the relay shall switch on and by how much higher shall be the next value. Second parameter is "TIME L." in range 0,0... 99,9 s determining the time for which the relay shall be switched on. Upon resetting the counter to zero the value is set, at which the relay shall switch on to value "PERIOD"

DOSING" regime may be set only for Limit 1

4.3.3.1.3 LIMITS - SETTING THE RELAY MODE

4.3.3.1.4 LIMITS - SETTING THE BOUNDARIES

Projection of individual units depends on the set "Type" of the limits

LIMIT Setting limit for relay switch on

- in full display range

HY57. Setting hysteresis only in (+) values

- in 1/10 of the display range

ON L. Setting the beginning of the range of limit switch-on

- in full display range

OFF L. Setting the end of the range of limit switch-on

- in full display range

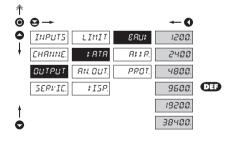

Setting the period of the limit switch-on

- in full display range

TIME. L Setting the delay of the limit

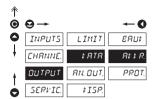

- in range 0...99,9 s

4.3.3.2.1 DATA OUTPUT - SETTING THE TRANSMISSION RATE

EAU:	Setting the rate of data output (baud)
1200	Rate - 1 200 Baud
2400	Rate - 2 400 Baud
4800	Rate - 4 800 Baud
9600	Rate - 9 600 Baud
19200	Rate - 19 200 Baud
38400	Rate - 38 400 Baud

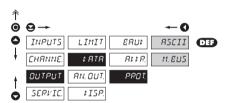

4.3.3.2.2 DATA OUTPUT - SETTING THE INSTRUMENT ADDRESS

FORE

Selection of values for

permanent projection on

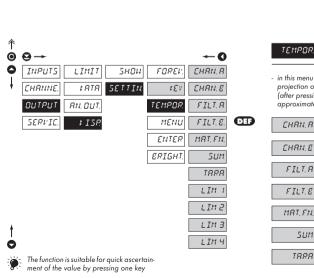

4.3.3.4.2 DISPLAY PROJECTION - AFTER PRESSING "LEFT"

in "MENU") is displayed, which can be edited

Projection of temporary value

 after pressing the key the selected value is displayed for approximately 2 s (selected in "TEMPOR.") with flashing decimal point

TEMPOR. Projection of temporary value

 in this menu the value for temporary projection on the display may be selected (after pressing ♠), which is displayed for approximately 2 s, with flashing decimal point

CHRIL. 8 Value of "Channel A"

CHRIL. 8 Value of "Channel B"

CTLL 9 Value of "Channel A" after

filtration

FILT. 8

filtration

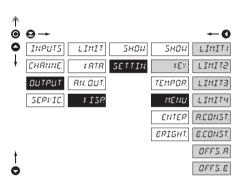

filtration

MRT. FN. Value of "Mathematic functions"

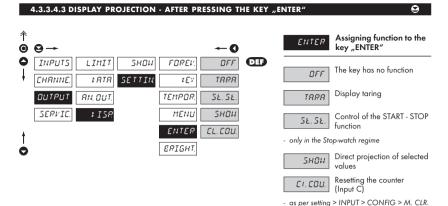

Sum Value of "Accumulated quantity"

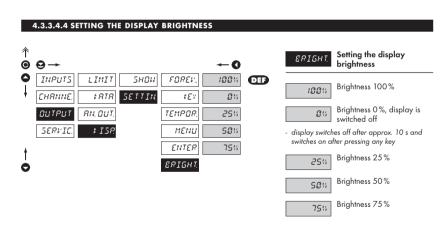

TRRR Tare value

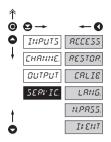

LIMY	Value of "Limit 4"
UN3M	Direct access to selected menu item (with. pasw.)
- the item is acc "KEY" > "ME	cessible after its setting in menu ENU"
LIMITI	Limit 1
LIMIT2	Limit 2
LIMIT2	Limit 3
LIMIT2	Limit 4
R.CONST	Multiplying constant "Channel A"
8.CON5T	Multiplying constant "Channel B"
0FF5.R	Shift of the beginning for "Channel A"
OFF 5. 8	Shift of the beginning for "Channel B"

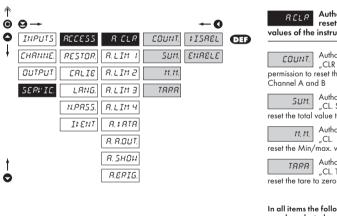

4.3.4 **CALIBRATION MODE - SERVICE**

4.3.4.1.1 SETTING THE ACCESS RIGHTS FOR "USER MODE" - RESETTING TO ZERO

Authorization for resetting the internal values of the instrument to zero Authorization for item

"CLR C.A." and "CLR C.B.", permission to reset the counter to zero,

Authorization for item "CL. SUM.", permission to reset the total value to zero

Authorization for item "CL. MM", permission to reset the Min/max, value to zero

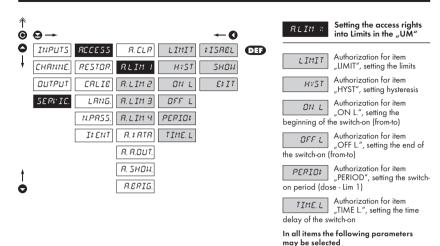

Authorization for item "CL. TAR.", permission to

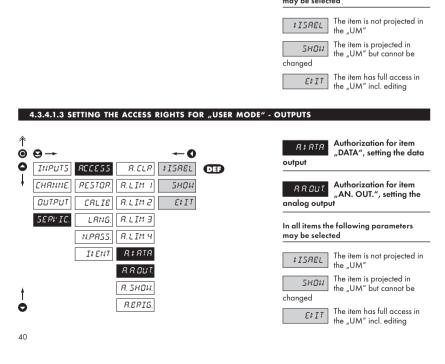

In all items the following parameters may be selected

The item is not projected in #ISREL the "UM"

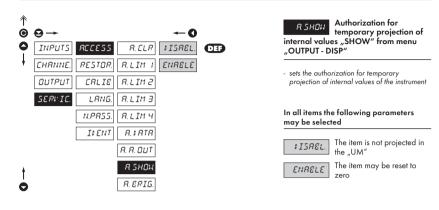

The item may be reset to ENRELE zero

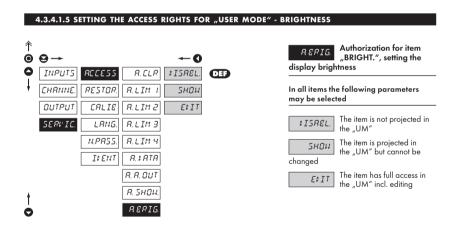

4.3.4.1.2 SETTING THE ACCESS RIGHTS FOR "USER MODE" - LIMITS

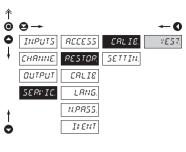

4.3.4.1.4 SETTING THE ACCESS RIGHTS FOR "USER MODE" - PROJECTION

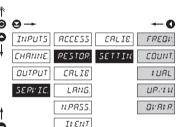

4.3.4.2 RETURN TO MANUFACTURE CALIBRATION/SETTING

 in case of incorrect setting or calibration it is possible to return to manufacture setting. Prior execution of the changes you will be asked to confirm your choice "Yes?"

ERLIE. Return to manufacture calibration of the instrument

SETTIN Return to manufacture setting

 reading the manufacture calibration and basic setting of items in the menu (DEF)

FREQUE Manufacture pre-setting for Frequency measurement

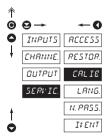

COUNT. Manufacture pre-setting for counter

Manufacture pre-setting for "DUAL"

Manufacture pre-setting for "UP/DW"

Manufacture pre-setting for "Counter - IRC"

4.3.4.3 INSTRUMENT CALIBRATION

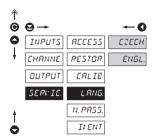

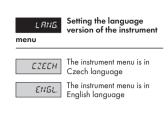

CRL I E

Instrument calibration

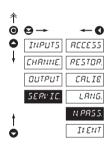

- after entering this item the reference frequency is set, at which calibration is performed. To approve the set frequency, confirm the report MEAS", the instrument consequently switches to colibration measuring (% is displayed) with measuring time of approx. cca 30 s
- stop-watch is calibrated by means of a time normal (e.g.: audio signal on the radio/ telephone), at first signal the stop-watch gets going from zero and after approx. 10 hours at second signal your confirm by pressing ENTER the lapsed time which you set here

4.3.4.4 LANGUAGE VERSION FOR THE INSTRUMENT MENU

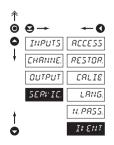

4.3.4.5 SETTING NEW ACCESS PASSWORD

NPR55. Setting new access password for "Configuration menu"

 this selection allows to change the numeric code which blocks the access into the "Configuration mode" of the instrument. Range of the numeric code is 0...9999

4.3.4.6 INSTRUMENT IDENTIFICATION

- the display shows the type identification of the instrument with the inspection number
- name of the instrument measuring mode version SW + hour SW - date (DD/MM/YY)

5. TABLE OF SYMBOLS

The instrument allows to add two descriptive characters to the classic numeric formats (at the expense of the number displayed places). The setting is performed by means of a shifted ASCII code. Upon modification the first two places display the entered characters and the last two places the code of the relevant symbol from 0 to 95. Numeric value of given character equals the sum of the numbers on both axes of the table.

Description is cancelled by entering characters with code 00

	0	1	2	3	4	5	6	7		0	1	2	3	4	5	6	7

6. DATA PROTOCOL

The instruments communicate via serial line RS232 or RS485. For communication they use either ASCII protocol or DIN MessBus protocol. The communication is running in the following format:

ASCII: 8 bit, no parity, one stop bit
DIN MessBus: 7 bit, even parity, one stop bit

Transmission rate is adjustable in the instrument menu and depends on the used control processor. The instrument address is in the instrument menu in the range of 0...31. Manufacture setting always presets the ASCII protocol, rate of 9600 Baud, address 00. Type of line used - RS232 / RS485 - is determined by exchangeable card automatically identified by the instrument.

COMMANDS FOR INSTRUMENT OPERATION

The commands are described in the description which can be found at www.orbit.merret.cz/rs.

The command consists of a couple number-letter, where the letter size is of importance.

COMMANDS NOT LISTED IN THE MENU

1 M	(1)	Send minimum value
2M	(1)	Send maximum value
1X	6 0	Send display value, data format "R <sp> DDDDDDDD"</sp>
2X	6 0	Send relay status, the instrument responds in series of digits 0,1 in the order from 1st relay
		1 means the relay is on, relays not used send back X
3X	(1)	Send the status of auxiliary inputs
1Z	(1)	Send HW instrument configuration
1x	(1)	Send output value from filter of Channel A
2x	(1)	Send output value from filter of Channel B
9x	(1)	Send output value of mathematic functions

7. ERROR STATEMENTS

ERROR	REASON	ELIMINATION
E. UNI	range underflow (A/D converter)	change the input signal value or change display projection
E. DVER	range overflow (A/D converter)	change the input signal value or change display projection
E. MRTH.	mathematic error, range of projection is out of display	change the set projection
E. I RTR	violation of data integrity in EEPROM, error upon data storage	in case of recurring report send the instrument for repair
E. 11E11.	EEPROM error	the "Def" values will be used in emergency, instru- ment needs to be sent for repair

TECHNICAL DATA 8.

INPUT

upon contact. TTL. NPN/PNP Type:

9. INSTRUMENT DIMENSIONS AND INSTAL.

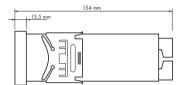

Front view

Panel cut

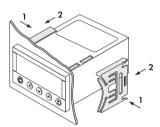

Side view

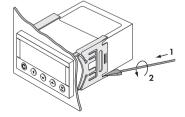

Panel thickness: 0.5...20 mm

Instrument installation

- 1. insert the instrument into the panel cut-out
- 2. fit both travellers on the box
- 3. press the travellers close to the panel

Instrument disassembly

- 1. slide a screw driver under the traveller wing
- 2. turn the screw driver and remove the traveller
- 3. take the instrument out of the panel

DECLARATION OF CONFORMITY 10.

Company: ORBIT MERRET, spol.s r.o. (Ltd.)

> Klánova 81/141 142 00 Prague 4 Czech Republic IDNo: 00551309

Manufactured: ORBIT MERRET, spol.s r.o. (Ltd.)

> Vodňanská 675/30 198 00 Prague 9 Czech Republic

declares at its full responsibility that the product presented hereunder meets all technical requirements, is safe for use when utilised under the terms and conditions determined by ORBIT MERRET, spol.s r.o. and that our company has taken all measures to ensure conformity of all products of the type listed hereunder, which are being brought out to the market, with technical documentation and requirements of the appurtenant statutory orders.

Product: 6 -digit programmable panel instrument

OM 611UQC Type:

Mode of asses. of conformity: §12, par. 4 b, d of Act No.22/1997 Sb.

Conformity is assessed pursuant to the following standards::

Electrical safety: FN 61010-1

EMC: EN 50131-1, par. 14 and par. 15

prEN 50131-2-1, par. 9.5.3

EN 50130-4, chapter 7.

EN 50130-4, chapter 8, EN 61000-4-11 EN 50130-4, chapter 9, EN 61000-4-2 EN 50130-4, chapter 10, EN 61000-4-3 EN 50130-4, chapter 11, EN 61000-4-6 EN 50130-4, chapter 12, EN 61000-4-4 EN 50130-4, chapter 13, EN 61000-4-5

EN 50130-5, chapter 20, prEN 50131-2-1, par. 9.3.1

EN 61000-3-2 + A12 EN 61000-4-8

and government ordinance:

Electrical safety: No. 168/1997 Sb. FMC: No. 169/1997 Sb.

The evidence are the protocols of authorized and accredited organization:

VTÚE Praha, experimental laboratory No. 1158 accredited by ČIA, o.p.s. with EN ISO/IEC 17025

Place and date of issue: Prague, 24. october 2002 Miroslay Hackl
