

# USER MANUAL

## OMX 103UNI

DUAL CHANNEL USER-CONFIGURABLE  
UNIVERSAL SIGNAL CONVERTOR

DC VOLTMETER/AMMETER  
PROCESS MONITOR  
OHM METR

TEMPERATURE DISPLAY FOR Pt 100/500/1 000  
TEMPERATURE DISPLAY FOR Ni 1 000/10 000  
TEMPERATURE DISPLAY FOR THERMO COUPLES  
DISPLAY FOR LINEAR POTENTIOMETERS

*Outstanding Measurement Value*

## **SAFETY INSTRUCTIONS**

Please read and observe the enclosed safety instructions carefully!

Installation, all operations, maintenance and service must be carried out by qualified personnel only and in accordance with the enclosed information and safety regulations.

The manufacturer is not responsible for any damage caused by improper installation, configuration, maintenance and service of the device.

The device must be installed correctly according to the actual application. Improper installation may cause malfunction, which may result in damage to the unit or an accident.

The device uses dangerous voltage that can cause a fatal accident. The unit must be disconnected from the power supply before starting troubleshooting (in case of malfunction) or before dismantling the unit. For safety information, EN 61 010-1 + A2 must be observed.

When removing or inserting an electronics card, observe the safety instructions and follow the recommended procedures. Disconnect the unit from power supply before inserting / extracting any electronics cards.

Do not attempt to repair or modify the device yourself. In case of malfunction the device must be dismounted and submitted to the manufacturer for repair.

These devices should be protected by either individual or shared fuses (circuit breakers)!

The device is not intended for installation in explosive areas. Use the device only outside the explosive areas.

## **TECHNICAL SPECIFICATIONS**

Instruments of the omx 103 series comply with the EU 2014/30/EU a 2014/35/EU directive and meet the following European standards:

EN 61010-1 Electrical safety

EN 61326-1 Electrical measuring, control and laboratory equipment  
- EMC requirements "Industrial Area"

IEC 980: 1993, c. 6 Seismic resistance

The device is suitable for unlimited use in agricultural and industrial areas.

 <b>DANGER</b> 	 <b>WARNING</b> 	 <b>ATTENTION</b>
<b>RISK OF ELECTRIC SHOCK</b> - Disconnect all power supply and live wires before servicing.  Failure to follow this instruction will result in death or serious injury.	<b>RISKS ASSOCIATED WITH USE</b> - Do not use this product in a safety critical system. - Do not disassemble, repair or modify the product. - Do not use the product outside the recommended operating conditions.  Failure to follow these instructions may result in death, serious injury, or damage to the equipment	<b>RISKS ASSOCIATED WITH USE</b> - Install a 100 mA fuse  Failure to observe this precaution could result in personal injury or equipment damage.

This electrical equipment may be installed, operated and maintained only by qualified personnel. ORBIT MERRET assumes no responsibility for any consequences arising from the use of this equipment.

## 2. DEVICE DESCRIPTION

### 2.1 Description

The OMX 103 series are DIN rail mountable programmable transducers designed for maximum convenience and user convenience. Available versions are UNI (universal), DC (DC current and voltage), PWR (power), UQC universal quadrature counter and T (load cell).

Type OMX 103UNI is a multifunctional dual-input device with the possibility of configuration for 8 different input variants easily configurable in the device menu.

The OMX 103 is based on a single-chip microcontroller with 24-bit A / D converter, which provides very good accuracy, stability and easy operation.

#### VERSIONS AND MEASURING RANGES

##### UNI

1 or 2 individual isolated inputs
DC $\pm 30/\pm 60/1000 \text{ mV}; \pm 20/\pm 40/\pm 80 \text{ V}; \pm 90/\pm 180 \text{ mA}$
PM $\pm 5/\pm 20 \text{ mA}/4...20 \text{ mA}; \pm 2/\pm 5/\pm 10 \text{ V}$
OHM $0...10/30/150/300 \Omega/0...1.5/3/15/30 \text{ k}\Omega$
Pt      Pt 50/100/500/1000
Cu      Cu 50/100
Ni      Ni 1 000/10 000
T/C     J/K/T/E/B/S/R/N/L
DU      Linear potentiometer (min. 500 $\Omega$ )

#### CONFIGURABLE PROJECTION

To be selected: input type and measuring range

Configuration: standard - projection setting for both endpoints of input range

teach-in - projected endpoints of input range can be assigned to any two values of (unknown) input signal.

manual - projection setting for both set endpoints of input range

Projection: -99...999

#### ANALOGUE OUTPUT

Type: isolated, user configurable, 16 bit resolution, rate < 1 ms

Quantity: 1...4

Ranges: 0...2/5/10 V,  $\pm 10 \text{ V}$ , 0...5 mA, 0/4...20 mA

#### COMPENSATION

Leads (RTD, OHM): 2 -wire compensation can be realised in the device menu

Probe (RTD): internal connection (resistance of leads inside the temperature probe)

Cold junction (T/C): manual or automatic. Selection of thermocouples as well as the cold junction compensation can be made in the menu. This could be set by user, or be automatic (temperature of screw terminals)

#### LINEARIZATION

Linearization\*: linear interpolation in 177 points (possible only with Link SW)

#### DIGITAL FILTERS

Floating average: from 2...30 measurements

Exponent. average: from 2...100 measurements

Arithmetic average: from 2...100 measurements

Rounding: setting the rounding step for the display

\* only for input types DC, PM, DU

**MATHEMATIC FUNCTIONS**

- Min/Max. vale: preserves min./max. values reached during a measurement  
 Tare: is used to reset the display to zero even when the input signal does not correspond to zero  
 Peak value: display projects only max. or min. value  
 Math operations: polynomial, 1/x, logarithmic, exponential, power, root, sin x  
                   and mathematic operations between inputs - sum, multiple and ratio

**EXTERNAL CONTROLS**

- Lock: front panel keys are blocked  
 Hold: freezing the display/instrument  
 Tare: applying tare/resetting tare  
 Resetting Min/Max: resetting of Min/Max value

**■ Controls**

Device is controlled by two keys located on the front panel or by OM Link SW. Settings can be realised in three levels.

**LIGHT****Simplified menu**

- contains only the most essential menu items that are necessary for setting up the device.  
 It can be password protected.

**PROFI****Complete menu**

- contains all menu items and it can be password protected

**USER****User define menu**

- some menu item (LIGHT/PROFI) can be included into this menu. Access rights to each menu may be assigned (to view only, or to edit)
- no password access

All configuralbe parameters are stored in EEPROM memory (remain stored even after power off).

All settings may be realised via PC' USB interface using our free to download SW called OM Link.

OM Link „Basic“ provides for connection of 1 ORBIT MERRIT device to 1 PC. OM Link also makes it possible for the measured values to be visualised and archived in the PC. „OM Link Standard“ does exactly the sam without the number of OM devices being limited.

**■ Options**

**Comparators** (in the form of relays or open collectors), are designed for monitoring one to six limit values. The user can select the limit mode: LIMIT / DOSE / FROM-TO. Limits have adjustable hysteresis in the full range of the displayed value and an optional switch-on delay in the range of 0... 99.9 s. Reaching the set limits is signalled by LEDs and at the same time by actuating the relevant relay.

**Data outputs** Due to their speed and accuracy, data outputs are suitable for transferring measured data to other displays, or directly to control systems. We offer isolated RS 232 and RS 485 data outputs with ASCII, DIN MessBus and MODBUS RTU protocol, Profibus DP communication card or Ethernet.

### 3. DEVICE CONNECTION

#### 3.1 Connection

Power supply leads should not be in the vicinity of the low voltage input signals.

Contactors, high power motors and other power elements should not be in the vicinity of this device.

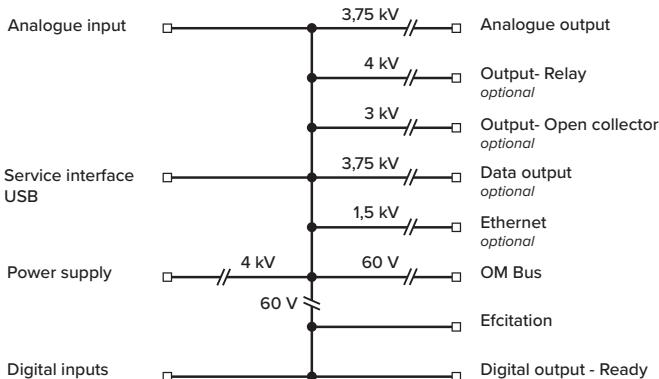

Input signal leads (measured value) should be sufficiently far away from all power lines and appliances. If this cannot be ensured, a grounded shielded cable (terminal E) must be used.

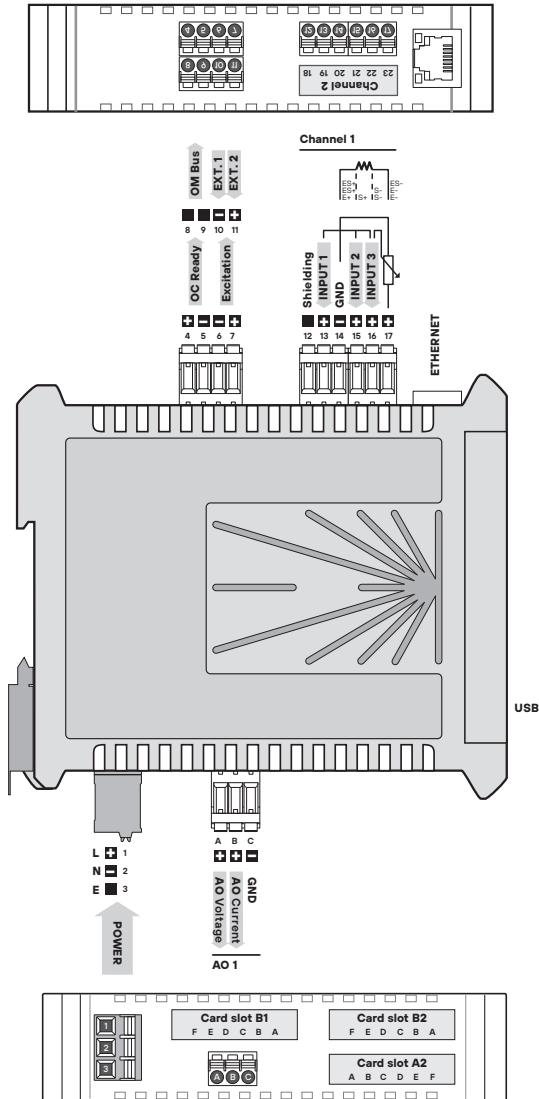

This device has successfully passed tests according to the industry standards, however we still recommend that you observe the above guidelines.

#### ■ Leads connection

①	 Connector pitch	3,5 mm	5 mm
②	  mm <sup>2</sup> / AWG	mm in. 8 0,32	mm in. 8 0,32
③	  ⊕ 15 Nm ⊖ 13.2 lb-in	Ø 2,5 mm 0,1in	Ø 3,5 mm 0,14in

#### ■ Galvanic isolation

**Marking of outputs in the menu**

- |    |                           |
|----|---------------------------|
| A2 | AV. 2 • RS. 1 • LIM. 1, 2 |
| B1 | AV. 3 • LIM. 3, 4         |
| B2 | AV. 4 • RS. 2 • LIM. 5, 6 |

### 3. DEVICE CONNECTION

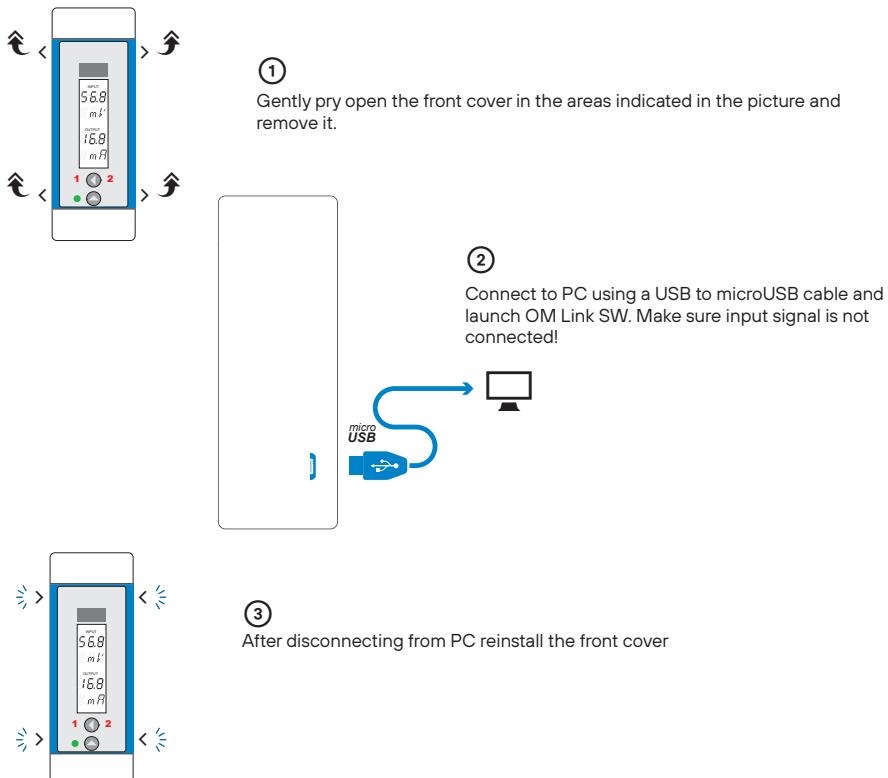

#### ■ Setting via USB interface

Use of OM Link software is recommended for more convenient setting of the converter. Use a USB to micro USB cable to connect to your computer.

The OM Link SW can be downloaded free of charge at [www.merret.cz/produkty/software/om-link](http://www.merret.cz/produkty/software/om-link)

There is a microUSB connector located under the front cover. To access the connector, the cover needs to be removed.

#### USB cable connection

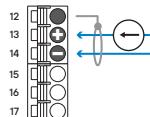

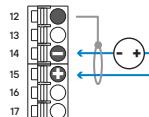

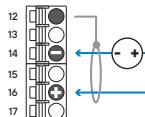

Both MicroUSB and OM Link connectors are galvanic connected to the input!

It is necessary to use an isolated USB cable if the input signal is connected

RISK OF COMPUTER DAMAGE

## ■ DC input signal connection

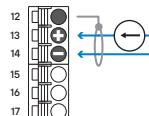

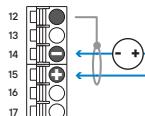

This input card can be inserted also into Channel 2 slot

Range	DC
$\pm 30/\pm 60/\pm 1000 \text{ mV}$	Input 3 14
$\pm 20/\pm 40/\pm 80 \text{ V}$	Input 2 13
$\pm 90/\pm 180 \text{ mA}$	Input 1 11

## ■ Process Monitor (PM) input signal connection

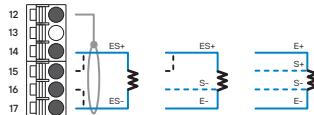

This input card can be inserted also into Channel 2 slot

Range	PM
$\pm 5/\pm 20/4\ldots 20 \text{ mA}$	Input 1 11
$\pm 5/\pm 10 \text{ V}$	Input 2 13

## ■ OHM, Pt, Ni, Cu input signal connection

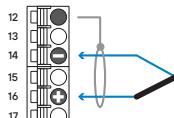

This input card can be inserted also into Channel 2 slot

In case of 2-wire or 3-wire connection it is essential to interconnect unconnected terminals (14+15/16+17 or 14+15).  
This rule also applies to Channel 2

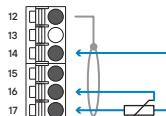

## ■ Thermocouple (T/C) input signal connection

This input card can be inserted also into Channel 2 slot

## ■ Linear potentiometer (DU) connection

This input card can be inserted also into Channel 2 slot

Linear potentiometer,  $R > 500 \Omega$

### 3. DEVICE CONNECTION

#### ■ Analogue output connection

This output card can be inserted into A2 and B2 slots

Range	PM
0...5 mA	AO - Current B
0...20 mA	AO - Current B
4...20 mA	AO - Current B
0...2 V	AO - Voltage A
0...5 V	AO - Voltage A
0...10 V	AO - Voltage A
±10 V	AO - Voltage A

#### ■ Data output connection

This output card can be inserted into A2 and B2 slots

#### RS 232

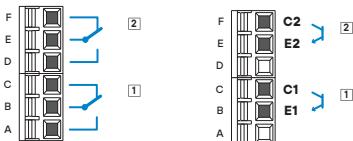

- One OMX 103 to one PC communication
- maximum cable length is not to exceed 15 m
- twisted cable AWG28 /0,08 mm<sup>2</sup> is recommended

#### RS 485

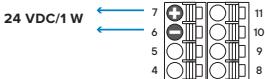

- up to 32 OMX 103 can be connected to one PC
- maximum cable length is not to exceed 500 m
- twisted cable AWG28 /0,08 mm<sup>2</sup> is recommended
- the last device on the line must have a terminating resistor connected to the RS card, a shorting jumper must be fitted

#### ■ Relay output and Open collector output connection

This output card can be inserted into A2, B1 and B2 slots

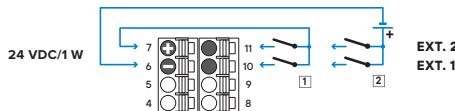

#### ■ Sensor excitation connection

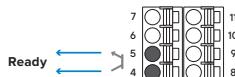

Sensor excitation is of fixed voltage. It is galvanic isolated.  
For connection examples see page 12

## ■ External controls connection

## ■ Connection of signal Ready

Output is active is the system is **ok**  
(Open collector 30 VDC/100 mA)

## ■ Connection of OM Bus

Wires are interchangeable, their polarity is unimportant

## ■ Power supply

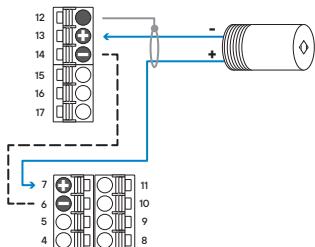

Voltage ranges are defined by hardware, not user selectable  
Always check the device label for correct voltage before connecting the power supply.

Grounding wire must be connected to terminal "E" at all times.

RISK OF ELECTRIC SHOCK

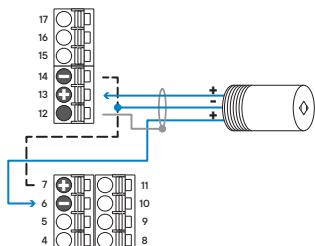

### 3. DEVICE CONNECTION

#### ■ Example connection of a 2-wire sensor with current signal output powered by instrument's excitation

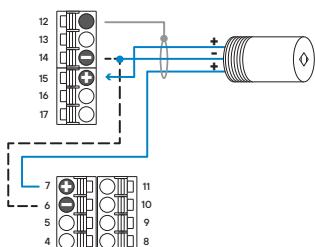

2-wire sensor with 4...20 mA output powered via the current loop by the convertor's own 24V sensor excitation

#### ■ Example connection of a 3-wire sensor with current signal output powered by instrument's excitation

3-wire sensor with 4...20 mA output powered by the convertor's own 24V sensor excitation

#### ■ Example connection of a 3-wire sensor with voltage signal output powered by instrument's excitation

3-wire sensor with 0...10 V output powered by the convertor's own 24V sensor excitation

## SETTING **LIGHT**

For trained users

Contains items necessary for basic instrument setting

Password protected access

Items from LIGHT menu can be incorporated into **USER** menu

Linear menu structure

## SETTING **PROFI**

For experienced users

Contains all menu items

Password protected access

Items from PROFI menu can be incorporated into **USER** menu

Tree menu structure

## SETTING **USER**

To be used by machine operators

Menu items are selected by user (from Profi/Light menus) as needed

Access is not password protected

Optional menu structure either tree (PROFI) or linear (LIGHT)

## 4.1 Setting

Besides the possibility of configuration from PC via the microUSB interface, the OMX 103 can also be configured by two control keys located on the front panel. Configuration can be performed in one of these three modes

### LIGHT

#### Basic programming menu

- contains only menu items essential for basic settings and can be numeric password protected

### PROFI

#### Detailed programming menu

- contains all menu items and can be protected by numeric password

### USER

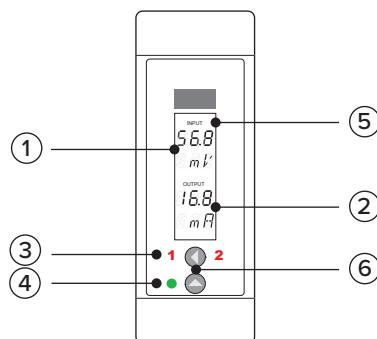

#### Customised programming menu

- any menu item can be selected to form USER menu. These items can have different access rights (viewable or editable)
- no password protection

Complete device settings can be done via USB connection. The SW is freely available at [www.orbit.merret.cz](http://www.orbit.merret.cz). Another possibility to connect to PC is via RS 232 or RS 485 data output card, provided the OMX 103 is fitted with one (optional).

Version „Basic“ of OM Link SW enables you to connect one OMX103 to one PC. It is possible to visualise and also record measured data on PC. There is no quantity restriction on the number of OM devices connected to one PC in SW OM Link "Standard".

## ■ Description of the display and control buttons

- ① **Input value**  
plus 3-characters used for displaying units
- ② **Output value**  
plus 3-characters used for displaying units
- ③ **Comparator status - red LED**  
ON digit is on  
OFF digit is off  
OFF digit is flashing, comparator action is restricted (time delay)
- ④ **Device status - green LED**  
ON LED is on  
ON LED is flashing - error message  
OFF LED is off
- ⑤ **Tare indication - Tare**  
when Tare is active, sign "INPUT" flashes
- ⑥ **Control keys**

## 4. DEVICE SETTING

### ■ Symbols used in this user manual

- DC PM DU** indicates settings for the given type of instrument  
**ΩHM RTD T/C**
- DEF** default settings
- 286** a taller and flashing digit indicates which position is being edited
- MIN** inverted triangle indicates a menu item which can be included into USER menu
- CON** broken line indicates a dynamic menu item, i.e. it is available only in particular selection/version
- ↑↓** press both keys simultaneously
- ↑↓ 2s** press both keys simultaneously for more than 2 seconds
- ✗** if this key is pressed, the newly set parameter will NOT be stored
- ✓** if this key is pressed, the newly set parameter WILL be stored
- 30** continues on page 30 (go to page 30)

### ■ Decimal point and the negative sign

#### Decimal point

Position of the decimal point is edited by key **1**. When the highest decade is exceeded, the entire display starts to flash. Position is then determined by pressing the **1** key.

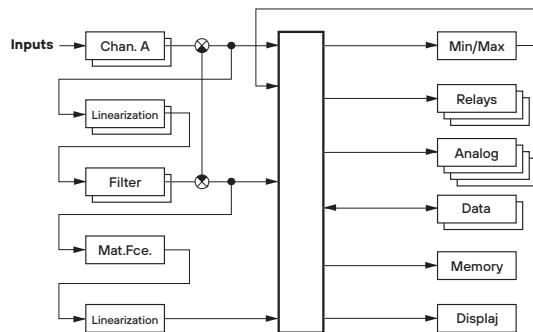

#### Negative sign

Setting of the negative sign is performed by key **1** on the higher decade. When editing this item, figures change in a numeric sequence 0, 1, ..., 9, „-“, 0, 1

## ■ Functions of control keys

Key symbol	Measurement	Menu	Setting of number/selection
	switching inputs/outputs	back to previous level	go to higher decade
	access into USER menu	go to next item	go up
	access into LIGHT menu	confirm selection	confirm setting/selection
	access into PROFI menu		

## ■ Flow chart of measured signal

## SETTING LIGHT

For trained users

Contains items necessary for basic instrument setting

Password protected access

Items from LIGHT menu can be incorporated into **USER** menu

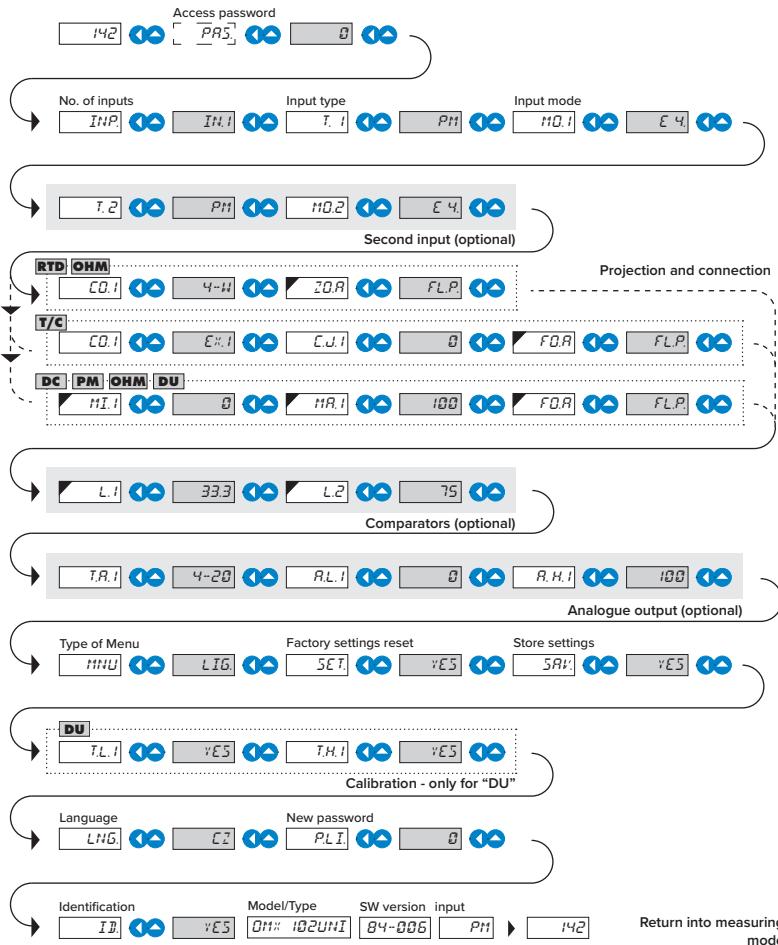

Linear menu structure

### 5.0 Setting “LIGHT”

- |              |   |
|--------------|---|
| <b>LIGHT</b> | <b>Basic programming menu</b> <ul style="list-style-type: none"><li>• contains menu items essential for basic instrument setting and is protected by user defined numeric password</li><li>• designed for trained users</li></ul> |
|--------------|---|

#### ■ Entry into “LIGHT” menu

- |  |   |
|--|---|
|  | <ul style="list-style-type: none"><li>• entering <b>LIGHT</b> menu</li><li>• password protected access</li><li>• in case the access password in menu item <b>SER. &gt; C. M. &gt; LIG.</b> is set to <b>0</b>, access is granted without the need to enter any password. This is the default setting.</li></ul> |
|--|---|

If there is a pause during configuration exceeding 60s, the device automatically exits configuration mode and returns into measuring mode.

**DEF** Default setting

Password	0
Menu	LIGHT
USER menu	Off

## 5. MENU LIGHT

142.8

Parameter	Display	User	Setting	Description
Password	PR5.		0 ... 999	Enter password to access menu
Access unrestricted				Free access to menu • Password item skipped. First menu item appears
Access protected by password				
Example setting Password - 42 > 42 0,  1,  2,  02,  12,  22,  32,  42,  INP.				

Parameter	Display	User	Description
Number of inputs	INP.		Number of active inputs
One input			Input 1 active
Two inputs		IN1	Inputs 1 and 2 active
Example setting No. of inputs - 1 input > IN1 IN2,  IN1,  T, I			

This dynamic item only appears in the 2-input version

Parameter	Display	User	Description
Type	T, I		Default setting
DC Voltmeter	DC		
Process monitor	PM	DEF	
Ohmmeter	OHM		
Thermometer Pt xxx	PL		
Thermometer Ni xxx	Ni		
Thermometer Cu xxx	CU		
Thermometer T/C	T/C		
Display for lin. potentiometer	DU		

Example setting Type - Thermometer pro Pt 100 > PT  
PM > DC > OHM > PL > Ni > CU

There are dynamic menu items associated with various types of inputs. See the following pages:

DC	page 22
PM	page 24
OHM	page 26
Pt	page 28
Ni	page 30
Cu	page 32
T/C	page 34
Du	page 36

## 5. MENU LIGHT

The diagram illustrates the Ni Measuring Mode menu structure. At the top left, the text "MEASURING MODE Ni" is displayed vertically. To its right, a dashed box contains a grid of eight buttons labeled N1.1 through N1.8. A blue arrow points from the text "M0.1" to the first button, N1.1. Another blue arrow points from the text "N1.1" to the second button, N1.2. A blue arrow points from the text "N1.2" to the third button, N1.3. A blue arrow points from the text "N1.3" to the fourth button, N1.4. A blue arrow points from the text "N1.4" to the fifth button, N1.5. A blue arrow points from the text "N1.5" to the sixth button, N1.6. A blue arrow points from the text "N1.6" to the seventh button, N1.7. A blue arrow points from the text "N1.7" to the eighth button, N1.8. To the right of the grid, there are two icons: a red square with a white circle and a green square with a white circle. Below the grid, a blue arrow points to the right, indicating the flow of the menu. At the bottom of the grid, there is a small circular icon with a dot inside.

Parameter	Display	User	Description	DEF
Measuring range	M0.1		Measuring range selection	
Ni 1000 - 5000 100°C	N1.1	-50°...100°C	Ni 1 000, 5 000 ppm/°C	
Ni 1000 - 5000 250°C	N1.2	-50°...250°C	Ni 1 000, 5 000 ppm/°C	
Ni 1000 - 6180 80°C	N1.3	-50°...80°C	Ni 1 000, 6 180 ppm/°C	
Ni 1000 - 6180 250°C	N1.4	-50°...250°C	Ni 1 000, 6 180 ppm/°C	
Ni 10000 - 5000 100°C	N1.5	-50°...100°C	Ni 10 000, 5 000 ppm/°C	
Ni 10000 - 5000 250°C	N1.6	-50°...250°C	Ni 10 000, 5 000 ppm/°C	
Ni 10000 - 6180 80°C	N1.7	-50°...80°C	Ni 10 000, 6 180 ppm/°C	
Ni 10000 - 6180 250°C	N1.8	-50°...250°C	Ni 10 000, 6 180 ppm/°C	

Example setting Range - Ni 10 000, 5000 ppm, 100°C > N1.5

N1.1 > N1.2 > N1.3 > N1.4 > N1.5 > N1.6 > N1.7 > N1.8

Parameter	Display	User	Description
-----------	---------	------	-------------

Type of connection **CO.I** Selecting the type of sensor connection

2-wire **2-W** **DEF**

3-wire **3-W**

4-wire **4-W**

Example setting Connection - 3-wire > 3-W

2-W > **3-W** > **FOR**

Compensation of a 2-wire connection can be performed in PROFI menu, see page 53

Parameter	Display	User	Description
-----------	---------	------	-------------

Decimal point **FOR** Setting of decimal point. It can be either fixed, or floating (most accurate projection format)

000 **000** Integer

00,0 **00,0** One decimal place

0,00 **0,00** Two decimal places

Floating decimal point **F.L.P.** Floating decimal point **DEF**

Example setting With one decimal place > **00,0**

**F.L.P.**, **RUT**, **00,0**, **000**, **00,0**, **SE T.**

## 5. MENU LIGHT

**MEASURING MODE T/C**

**MO.I**

Parameter	Display	User	Description
Measuring range	MO.I		Measuring range selection
B	B		Thermocouple B (PtRh30-PtRh6)
E	E		Thermocouple E (NiCr-CuNi)
J	J		Thermocouple J (Fe-CuNi)
K	K		Thermocouple K (NiCr-Ni) <span style="float: right;">DEF</span>
N	N		Thermocouple N (OmegaGalloy)
R	R		Thermocouple R (Pt13Rh-Pt)
S	S		Thermocouple S (PtRh10-Pt)
T	T		Thermocouple T (Cu-CuNi)
L	L		Thermocouple L (Fe-CuNi)
XK	XK		Thermocouple Chromel-Copel

Example setting Thermocouple N > N  
MO.I > N > > CO.I

**CO.I**

Parameter	Display	User	Description
Cold junction	CO.I		<b>Cold junction compensation (CJC)</b>
On terminals	IN1		Measurement without a referential thermocouple • measurement of cold junction on connector terminals <span style="float: right;">DEF</span>
On terminals with ref. T/C	IN2		Measurement with a referential thermocouple • CJC is measured on device's connector terminals with a referential thermocouple in antiserial connection
Without referential T/C	EX1		Measurement without a referential thermocouple • entire set up is operated in homogenous and constant temperature
Compensation box	EX2		Measurement with a referential thermocouple • when Compensation box is used

Example setting Connection with referential thermocouple > IN2  
IN1 > IN2 > > CO.I

Parameter	Display	User	Setting	Description
Temperature of cold junction	C.J. I		-20 ... 99	Setting of cold junction temperature • Range: -20...99°C • <b>DEF</b> 0

Example setting Temperature of cold junction 12°C > 12  
**0> 1> 2> 02> 12> F.O.R**

Parameter	Display	User	Description
Decimal point	F.O.R		Setting of decimal point. It can be either fixed, or floating (most accurate projection format)
000	000		Integer
00,0	00,0		One decimal place
0,00	0,00		Two decimal places
Floating decimal point	F.L.P.		Floating decimal point <b>DEF</b>

Example setting With a floating decimal point > F.L.P.  
**F.L.P. > SET.**

\* The following menu item is dynamic and it depends on options fitted

Menuitems "CO.1" and "C.J.1" are not available for T/C type "B".  
 The methodology and procedure for setting the cold junction is described in a separate chapter. page <?>

## 5. MENU LIGHT

Example setting Limit 2 > 80.0  
66.6, ▲, 66.7, ▲, 66.8, ▲, 66.9, ▲, 66.0, ▲, 66.0, ▲, 67.0, ▲, 68.0, ▲, 69.0, ▲, 60.0, ▲, 60.0, ▲, 70.0, ▲, 80.0, ▲, ▲, SET.

\* The following menu item is dynamic and it depends on options fitted

Menu items related to limit configuration only become available when the device contains optional modules with limit functionality. Depending on configuration it is possible to set limits L. 1, L. 2, L. 3, L. 4, L. 5 or L. 6 in menu LIGHT.

Parameter	Display	User	Description
Range of AO signal	T.R.1		Selection of analogue output type
0...20 mA	I20		
4...20 mA	ET4		indication of a broken input signal loop with an error message • 3 mA
4...20 mA	T.4		indication of a broken input signal loop • 3 mA
4...20 mA	E.4		with an error message • 3 mA
4...20 mA	I.4		
0...5 mA	I.5		
0...2 V	U2		
0...5 V	U5		
0...10 V	U10		
±10 V	-10		
Example setting Range ±10 V > U10			
<i>ET4&gt;T.4&gt;E.4&gt;I.4&gt;I.5&gt;U2&gt;U5&gt;U10&gt;-10&gt;RL.1</i>			

AVAILABLE ONLY WITH OPTION ANALOGUE OUTPUT

## 5. MENU LIGHT

AVAILABLE ONLY WITH OPTION ANALOGUE OUTPUT

Parameter	Display	User	Setting	Description
Low End of AO	R.L. I		-99 ... 999	Assigning a projected display value to the analogue output's Low End • Range: -99...999 • DEF 0

Example setting AO Low End > 0

0, > R.L. I

Parameter	Display	User	Setting	Description
High End of AO	R.H. I		-99 ... 999	Assigning a projected display value to the analogue output's High End • Range: -99...999 • DEF 100

Example setting AO High End > 380

100, > 100, > 10, > 120, > 130, > 140, > 150, > 160, > 170, > 180, > 180, > 280, > 380, > SET.

\* The following menu item is dynamic and it depends on options fitted

Menu items related to analogue output configuration only become available when the device contains optional modules with analogue output functionality. Depending on configuration it is possible in LIGHT menu to set analogue outputs AV.1, AV.2, AV.3 and AV.4

Parameter	Display	User	Description
Factory reset	5E7.		Reset to factory default
Factory defrault	FIR.		Reset to factory default
User settings	USR.		<p>Reset to User settings</p> <ul style="list-style-type: none"> <li>Device will be reset to the original factory default settings. These menu items are marked with DEF symbol in this user manual.</li> </ul>

Example setting Reset to factory default > FIR.  
FIR > > SAV:

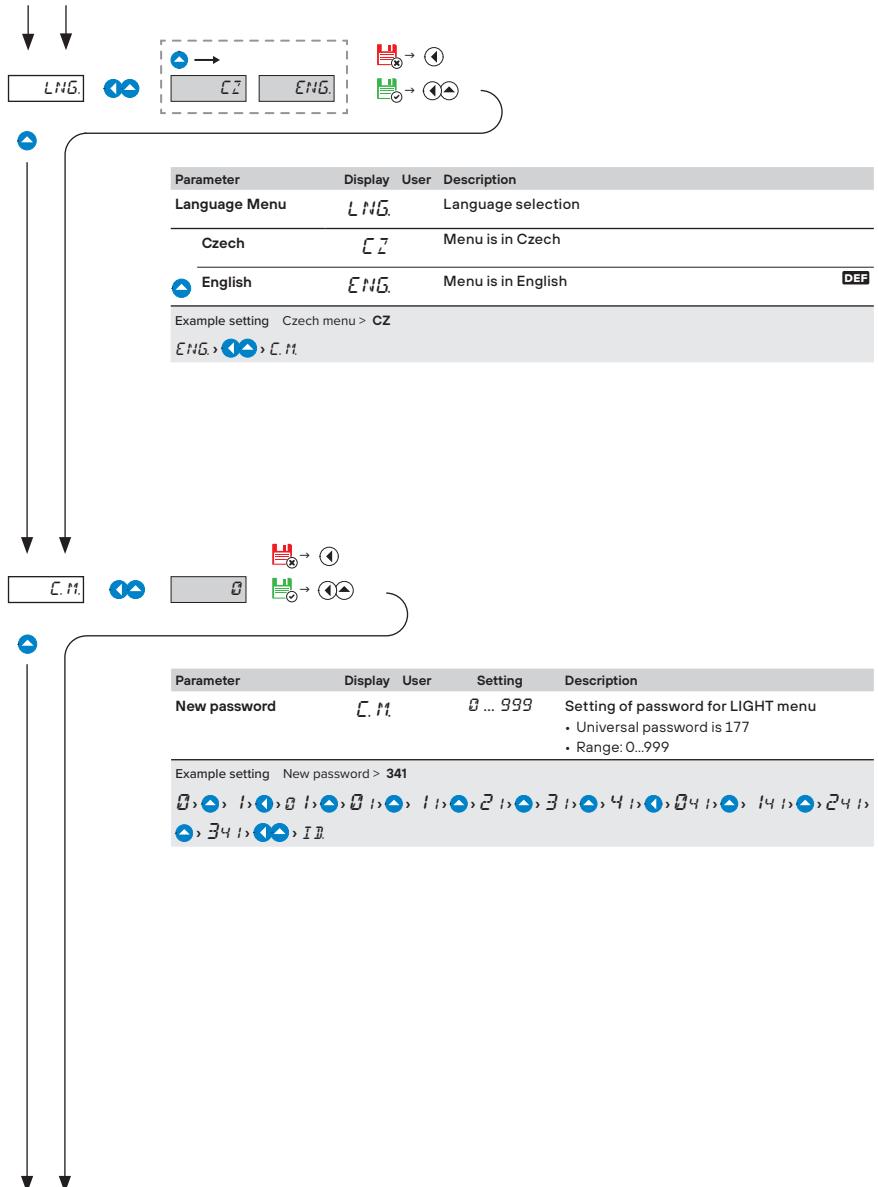

Parameter	Display	User	Description
Store configuration	5AV.		<p>Stores user defined configuration</p> <ul style="list-style-type: none"> <li>This customised setting stored in the unit can always be easily restored.</li> </ul>
Confirm your selection	YES		<p>You will be prompted to confirm your selection before changes are executed.</p> <p>YES</p>

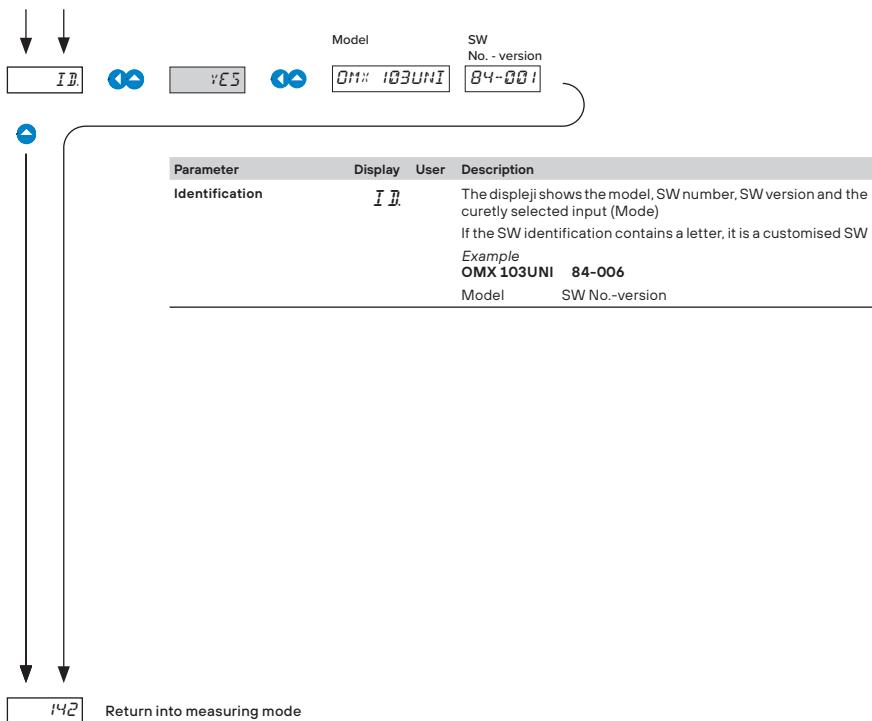

Example setting Restore to factory default > FIR.  
YES > > LNG:

Changes will be applied next time you enter the menu

## 5. MENU LIGHT

# SETTING PROFI

For experienced users

Contains all menu items

Password protected access

Items from PROFI menu can be incorporated into **USER** menu

Tree menu structure

## 6.0 Setting "PROFI"

---

### PROFI      Detailed programming menu

- contains all menu items and can be protected by numeric password
- designed for experts

### ■ Entry into "PROFI" menu

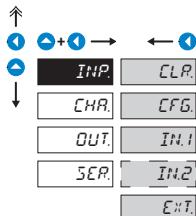

- entry into the PROFI menu
- access is password protected
- in case the access password in menu item **SER. > C. M. > PRO.** is set to **0**, access is granted without the need to enter any password.

## 6. MENU PROFI

### 6.1 Setting - INPUT

The primary instrument parameters are set in this menu

<b>CLR.</b>	Reset of internal values
<b>CFG.</b>	Configuration of active inputs
<b>IN.1</b>	Input 1 configuration
<b>IN.2</b>	Input 2 configuration
<b>EXT.</b>	External input configuration

#### 6.1.1 Reset of internal values

**INP.** **CLR.**

Parameter	Display	User	Description
<b>CLR.</b>	<b>CLR.</b>		Reset of internal values • menus items shown depend on device configuration
Tare reset Channel A	<b>C.TA</b>		Reset of Tare in Channel A
Tare reset Channel B	<b>C.TB</b>		Reset of Tare in Channel B
Tare reset Channel A+B	<b>C.TA+B</b>		Reset of Tare in Channel A and B simultaneously
Reset of min/max vale	<b>CMM</b>		Reset of memory which stores both the minimum a maximum value registered automatically since last reset
Memory reset	<b>CME</b>		Reset of built-in memory which stores measured values in modes FAST or RTC • this built-in memory is optional, not default. Refer to order code.

### 6.1.2a Rate of measurement

INP. > CFG. > M.P.S >

**M.P.S.**

M.P.S.

Parameter	Display	User	Setting	Description
Measurement rate	40		0.1; 0.5; 1.2; 2.5; 5.0; 10; 20; 40; 80; 160	0.5 ... 160 measurements/s . DEF 5 measurements/s

→ →

### 6.1.2b Number of active inputs

INP. > CFG. > INP. >

**INP.**

INP.

Parameter	Display	User	Description
Number of inputs	INP.		This menu item is available only in a 2-input version
One input	INP1		Active input 1
Two inputs	INP2		Active input 1 i 2 DEF

→ →

### 6.1.2c Switching between inputs

INP. > CFG. > SWI. >

**SWI.**

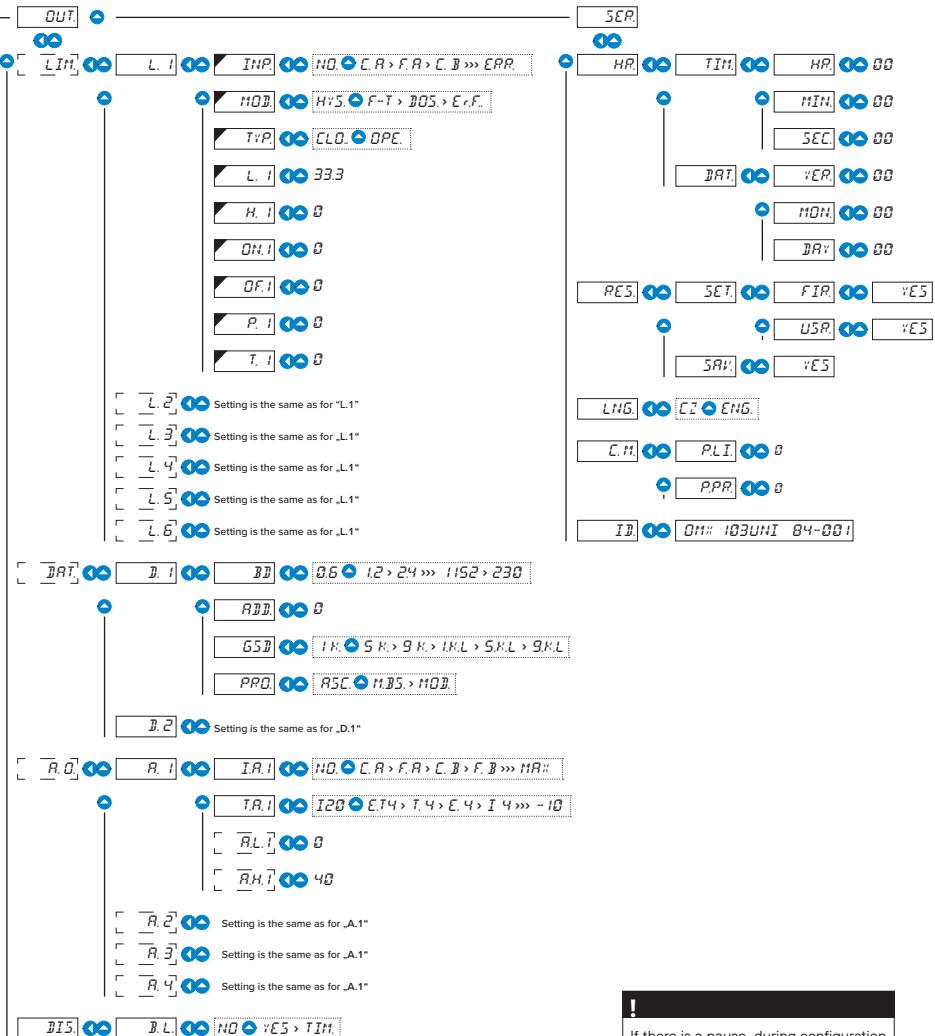

SWI.

Parameter	Display	User	Description
Input switching	SWI.		This menu item is available only in a two-input version
Manual	MAN		Switching between inputs is controlled by a front panel key or by a user selected external logic input DEF
Automatic	AUT.		Switching between inputs is automatic. Time period can be set in T.SW.

→ →

## of PROFI MENU

If there is a pause during configuration exceeding 60s, the device automatically exits configuration mode and returns into measuring mode.

## 6. MENU PROFI

### 6.1.2d Input switching period

2s  
2s → INP. → 2s → ↗, CFG. → ↗ ↘ ↗ ↘ → ↗ T.SW. → ↗ ↘

Parameter	Display	User	Setting	Description
Period of switching	2.0	0.5 ... 99.5	Setting of time period for input switching in automatic mode FL.P. • Range: 0.5...99.5 s (increment 0.5) • DEF 2,0 s	

→ ↗ ↘ → ↗ ↘ → ↗ ↘

### 6.1.3a Selecting Type of input for Input 1

2s  
2s → INP. → 2s → ↗, IN.1. → ↗ ↘ → T. 1, ↗ ↘

Parameter	Display	User	Description
Type	T. 1		There are dynamic menu items associated with various types of inputs
DC Volt meter	DC		
Process monitor	Pm	DEF	
Ohmmeter	OHM		
Thermometer Pt xxx	PT		
Thermometer Ni xxx	NI		
Thermometer Cu xxx	CU		
Thermometer T/C	T/C		
Display for lin. potentiometer	DU

## 6. MENU PROFI

Parameter	Display	User	Setting	Description	
Measuring range	M0.1			Measuring ranges related to individual Types of input listed in menu item T.1	
Thermometer Cu xxx <b>Cu</b>	Cu.1	Cu.1 Cu.2 Cu.3 Cu.4 Cu.5 Cu.6	Cu 50, 4 280 ppm/^°C Cu 50, 4 260 ppm/^°C Cu 100, 4 280 ppm/^°C Cu 100, 4 280 ppm/^°C Cu 100, 4 260 ppm/^°C Cu 100, 4 260 ppm/^°C	-200...200°C -50...200°C -200...117°C -200...200°C -50...118°C -50...200°C	<b>DEF</b>
Thermometer T/C <b>T/C</b>	K	B E J K N R S T L XX	B (PtRh30-PtRh6) E (NiCr-CuNi) J (Fe-CuNi) K (NiCr-Ni) N (Omegaalloy) R (Pt13Rh-Pt) S (PtRh10-Pt) T (Cu-CuNi) L (Fe-CuNi) XX Chromel-Copel	300...1 820°C -200...690°C -200...900°C -200...1 300°C -200...1 300°C -50...1 740°C -50...1 760°C -200...400°C -200...900°C -200...800°C	<b>DEF</b>

### 6.1.3c Type of connection for input 1

**RTD** **OHM** **T/C**

2s → INP. → CO.1 → CO.1 → IN.1 → CO.1 → CO.1

Parameter	Display	User	Description
Type of connection	CO.1		<b>Type of connection configuration (OHM, Pt, Ni, Cu)</b> • When T.1 > OHM, Pt, Ni, Cu
2wire	2-W		2-wire connection
3wire	3-W		3-wire connection
4wire	4-W		4-wire connection

INP. > IN.1 > CO.1 >

CO.1

Parameter	Display	User	Description
Cold Junction	CO.1		<b>Cold junction compensation (CJC)</b> • when T.1 > T/C
On terminals	IN.1		Measurement without a referential thermocouple • measurement of cold junction on connector terminals
			→   →
On terminals with ref. T/C	IN.C		Measurement with a referential thermocouple • CJC is measured on device's connector terminals with a referential thermocouple in antiserial connection
			→   →
Without ref. T/C	E.X.1		Measurement without a referential thermocouple • entire set up is operated in homogenous and constant temperature
			→   →
Compensation box	E.X.C		Measurement with a referential thermocouple • when Compensation box is used
			→   →

There is more information on CJC configuration in the chapter dedicated to CJC on page 86

For T/C type "B" menu items CO.1 and C.J.1 are NOT accessible

### 6.1.3d Cold junction compensation for input 1

T/C

INP. > IN.1 > C.J.1 >

C.J.1

Parameter	Display	User	Setting	Description
Cold junction compensation			-20 ... 99	Same CJC configuration applies to Channel 1 and Channel 2 • Range: -20...99°C . DEF 0°C

### 6.1.3e Additional resistance for input 1

RTD OHM

INP. > IN.1 > R.A.1 >

R.A.1

Parameter	Display	User	Setting	Description
Additional resistance			0 ... 999	when it is necessary to offset the beginning of the range by certain value, e.g. while using sensor in measuring head to compensate for leads' resistance • Range: 0...999 Ω . DEF 0 Ω

## 6. MENU PROFI

### 6.1.3f Compensation of 2-wire connection for input 1

RTD OHM

2s  
INP. > IN.1. > LE.1.

Parameter	Display	User	Setting	Description
Compensation of 2-wire connection	YES			To get an accurate reading when using a 2-wire connection, the leads' resistance has to be compensated for
OHM, RTD				<ul style="list-style-type: none"><li>Before confirming the YES prompt on the display, create a short circuit at the far end of the leads. The OMX will effectively measure the leads' resistance and compensate for it</li></ul>

→ → → →

### 6.1.3g Selecting projection mode for input 1

DC PM DU OHM

2s  
INP. > IN.1. > SE.1.

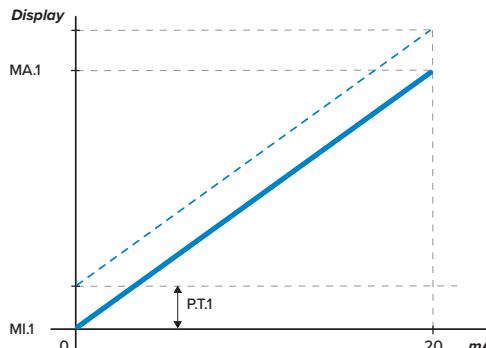

Parameter	Display	User	Description
Projection mode	SE.1		Selecting projection mode when setting the min/max. values to be shown on the display relevant for input 1
Standard	STD		Standard setting. The min. and max. values to be displayed are linked through the menu to the min and max values of input signal. <ul style="list-style-type: none"><li>Items MI.1 and MA.1</li></ul> DEF
Teach-in	T.I.N		Teach-in mode is used with sensors that are not used in their full span and their narrowed-down electrical range is therefore unknown. <ul style="list-style-type: none"><li>OMX 103UNI measures the range by itself when prompted.</li><li>This mode is used primarily with linpot sensors in DU range</li><li>Items T.L.1 and T.H.1</li></ul> Example Input 4...20 mA > projection 0...250 Setting > MI.1 = 0, Ma.1 = 250
Manual	MAN		Manual mode is suited for sensors that do not output signal in its full range, however their (narrowed-down) signal range is known. <ul style="list-style-type: none"><li>Values of the range are entered manually.</li><li>Items R.L.1 a R.H.1</li></ul> Example Input 4...20 mA with manual correction of range > projection 0...250 R.L.1 = 0 > correction of range to 4.15 mA > YES R.H.1 = 250 > correction of range to 18.6 mA > YES

→ → → →

### 6.1.3h Setting of display projection for input 1 in mode "Standard"

INP. > IN.1 > RA.1 >

Parameter	Display	User	Setting	Description
Projection setting	<i>PR.1</i>			Setting of display projection for input 1 in mode STD.
<i>For mode SE.1 &gt; STD</i>				
Min value	<i>MI.1</i>	-99 ... 999		Setting of display projection that corresponds to the minimum level of input signal <ul style="list-style-type: none"> <li>Range: -99...999</li> <li>. DEF 0</li> </ul>
→   →				
Max value	<i>MR.1</i>	-99 ... 999		Setting of display projection that corresponds to the maximum level of input signal <ul style="list-style-type: none"> <li>Range: -99...999</li> <li>. DEF 100</li> </ul>
→   →				
Fixed Tare	<i>PT.1</i>	-99 ... 999		This setting is used when the beginning of the range needs to be off-set by a known value <ul style="list-style-type: none"> <li>In setting (<i>P.T.1</i> ≠ 0) the symbol INPUT on the display is off</li> <li>Range: -99...999</li> <li>. DEF 0</li> </ul>
→   →				

## 6. MENU PROFI

### 6.1.3i Setting of display projection for input 1 in mode "Teach-in"

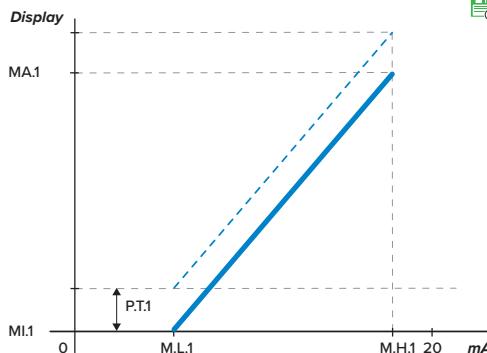

2s  
INP. > INP. > INP. > INP. > IN.1 > IN.1 > IN.1 > IN.1 > IN.1 > RA.1 > RA.1

Parameter	Display	User	Setting	Description
Projection setting	RA.1			Setting of display projection for input 1 in mode T.IN.
<i>For mode SP.1 &gt; T.IN.</i>				
Min value	MI.1	-99 ... 999		Setting of display projection that corresponds to the minimum level of input signal <ul style="list-style-type: none"><li>Range: -99...999</li><li>. DEF 0</li></ul>
				→   →
Max value	MR.1	-99 ... 999		Setting of display projection that corresponds to the maximum level of input signal <ul style="list-style-type: none"><li>Range: -99...999</li><li>. DEF 100</li></ul>
				→   →
Measurement of Min signal	T.L.1			Connect input signal and set it to its minimum level. In case of a moving sensor move it to its low end position <ul style="list-style-type: none"><li>When the display value is stable, confirm by YES</li></ul>
				→   →
Measurement of Max signal	T.H.1			Connect input signal and set it to its maximum level. In case of a moving sensor move it to its high end position <ul style="list-style-type: none"><li>When the display value is stable, confirm by YES</li></ul>
				→   →
Fixed Tare	PT.1	-99 ... 999		This setting is used when the beginning of the range needs to be off-set by a known value <ul style="list-style-type: none"><li>In setting (PT.1 ≠ 0) the symbol INPUT on the display is off</li><li>Range: -99...999</li><li>. DEF 0</li></ul>

Max value	<i>MR.1</i>	-99 ... 999		<ul style="list-style-type: none"> <li>Setting of display projection that corresponds to the maximum level of input signal</li> <li>Range: -99...999</li> <li>.DEF 100</li> </ul> →   →
<i>Setting of signal min</i>				
Setting of signal min	<i>PL.1</i>	-99 ... 999		<ul style="list-style-type: none"> <li>Enter the value of minimum signal</li> <li>Range: -99...999</li> </ul> →   →
<i>Setting of signal max</i>				
Setting of signal max	<i>PH.1</i>	-99 ... 999		<ul style="list-style-type: none"> <li>Enter the value of maximum signal</li> <li>Range: -99...999</li> </ul> →   →
<i>Fixed tare</i>				
Fixed tare	<i>PT.1</i>	-99 ... 999		<ul style="list-style-type: none"> <li>This setting is used when the beginning of the range needs to be off-set by a known value</li> <li>In setting (PT.1 ≠ 0) the symbol INPUT on the display is off</li> <li>Range: -99...999</li> <li>.DEF 0</li> </ul> →   →

## 6. SETTING PROFI

### 6.1.4a Selecting Type of input for Input 2

2s INP. IN.2 T. 2

Parameter	Display	User	Description
Type	T. 2		There are dynamic menu items associated with various types of inputs
DC Volt meter	DC		
Process monitor	P/M	DEF	
Ohmmeter	ΩHM		
Temperature display Pt xxx	PT		
Thermometer Ni xxx	NI		
Thermometer Cu xxx	CU		
Thermometer T/C	T/C		First thermocouple must always be connected to Input 1, because that is where the referential temperature is taken for Cold Junction Compensation • If thermocouple is connected also to Input 2, referential temperature for CJC is adopted from Input 1
Display for lin. potentiometer	DU		

Further settings are identical as those described in IN.1

### 6.1.4a External logic input functions

INP. > EXT. > EX.1 >

EX.1

EX.1

Parameter	Display	User	Description
Function of input 1	EX.1		There are dynamic menu items associated with various types of input modes
Function not assigned	OFF		Input is deactivated
Hold	HL.D.		HOLD function is activated
Menu access blocked	L.PH		When activated, access to LIGHT/PROFI menu is blocked
Tare Input 1	T.R.I		Activation of Tare for Input 1
Tare Input 2	T.R.2		Activation of Tare for Input 2
Reset Tare Input 1	C.T.R		Reset of Tare for Input 1
Reset Tare Input 2	C.T.2		Reset of Tare for Input 2
Reset Min/Max Values	C.MM		Reset of Min. and Max. values
Recording active	S.RV		Recording of measured values into internal memory is activated <ul style="list-style-type: none"> <li>Only when options FAST/RTC are present in the device</li> </ul>
Records erased	C.M		All records of measured values are erased from the device memory <ul style="list-style-type: none"> <li>Only when options FAST/RTC are present in the device</li> </ul>

→ →

INP. > EXT. > EX.2 >

EX.2

EX.2

Parameter	Display	User	Description
Function of input 2	EX.2		There are dynamic menu items associated with various types of input modes
Menu access blocked	L.PH		When activated, access to LIGHT/PROFI menu is blocked

→ →

Further settings of menu item EX.2 are identical to those described in EX.1

## 6. MENU PROFI

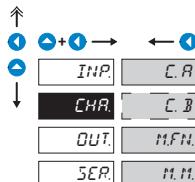

### 6.1.4b Hold function

2s

Parameter	Display	User	Description	DEF
Functionality of HOLD	 <b>M.HL.</b>		Selecting which functions will be affected by the HOLD function when this function is activated through a logical input	
Display	 <b>DIS.</b>		The value on the display is frozen	
Display + AO	 <b>D/AO.</b>		Display value and analogue output signal are frozen	
Display + AO + Limits	 <b>D/AL.</b>		Display value and analogue output signal and limits are frozen	
Entire device	 <b>ALL</b>		The entire device is frozen and does not respond to input signal	

## 6.2 Setting - CHANNELS

Input parameters are set in this menu

**C.R** Setting the parameters of "Channel A"

**C.B** Setting the parameters of "Channel B"

**M.FN** Setting the parameters of math functions

**M.M** Selecting the channel from which Min/Max values will be evaluated

### 6.2.1a Setting filters in channel A

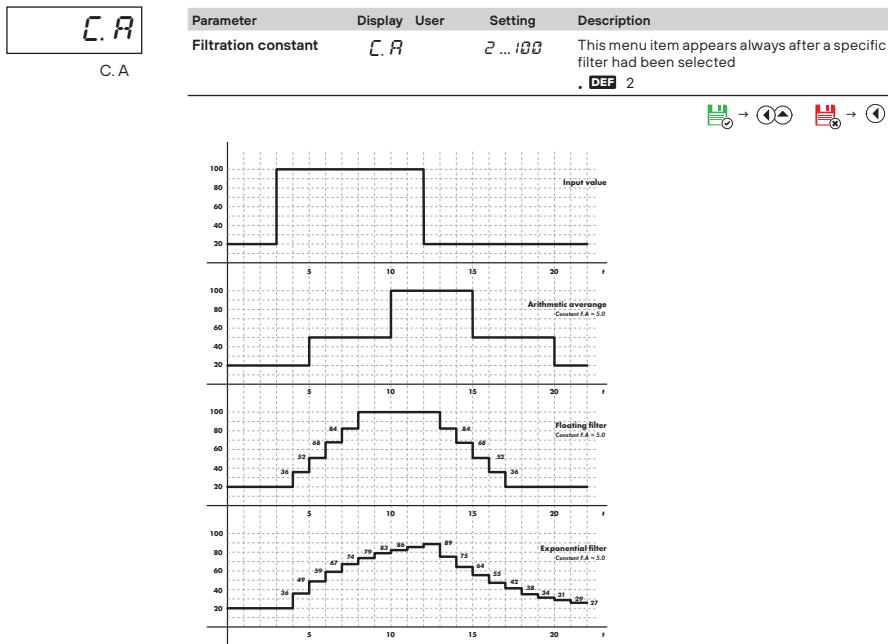

2s → ↗ CHA. → ↘ C. A → ↗ FI.A → ↘ MD.A → ↘

Parameter	Display	User	Setting	Description
Selecting filters for input 1	MD.R			Sometimes it may be desirable to appropriately mathematically adjust the measured data before displaying it. The following filters are designed to do just that.
Not applied	OFF			Filter is disabled <b>DEF</b>
Average	AV.R.	2 ... 100		Average calculated from measured values • arithmetic average calculated from a specified number of samples taken from <b>C. A</b> • Range: 2..100
Floating filter	FL.D.	2 ... 30		Floating filter • floating arithmetic average calculated from a specified number of samples taken from <b>C. A</b> recalculated with every new incoming sample • Range: 2..30
Exponential filter	EXP.R.	2 ... 100		Exponential filter • First order integration filter with time constant <b>C. A</b> measurement • Range: 2..100
Rounding	RND.	2 ... 100		Rounding of the measured value • it is set by any K. number which determines the display step • e.g: <b>C. A</b> = 2,5 > display 0, 2,5, 5,... • Range: 0...999

## 6. MENU PROFI

2s CHA. C. A FI.A C. A

### 6.2.1b Position of decimal point for channel A

2s CHA. C. A FO.A

Parameter	Display	User	Description
FO.A	FO.A		Setting of decimal point. It can be either fixed, or floating (most accurate projection format)
FO.O	000		Integer
FO.0	00.0		One decimal place
FO.00	0.00		Two decimal places
FO. Floating decimal point	FLP		Floating decimal point

→ →

### 6.2.1c Recording of data into device memory for channel A

→ CHA. → C. A → → LO.A → SV.A →

Parameter	Display	User	Description	
Recording of measured values	SV.R		This menu item allows you to record values into the device built-in memory. Further settings in TX. > PAM. This menu item is dynamic and becomes available only when the device is fitted with Data recording option (part of the order code)	<b>DEF</b>
No recording	NO		Measured data is not recorded	
All data	ALL		All measured data is recorded	
Data inside interval	IN		Only data measured inside a set value interval is recorded into the memory	
Data outside interval	OUT		Only data measured outside of a set value interval is recorded into the memory	

→ →

→ CHA. → C. A → → SV.A → → FR.A →

Parameter	Display	User	Setting	Description	
Start of interval	FRR		-99 ... 999	Setting the interval's start value • Range: -99...999 • <b>DEF</b> -99	
End of interval	TDR		-99 ... 999	Setting the interval's end value • Range: -99...999 • <b>DEF</b> 999	

→ →

Parameter	Display	User	Setting	Description	
TO.A	DOR		-99 ... 999	Setting the interval's end value • Range: -99...999 • <b>DEF</b> 999	

→ →

## 6. MENU PROFI

### 6.2.1d Description of measured values for input 1

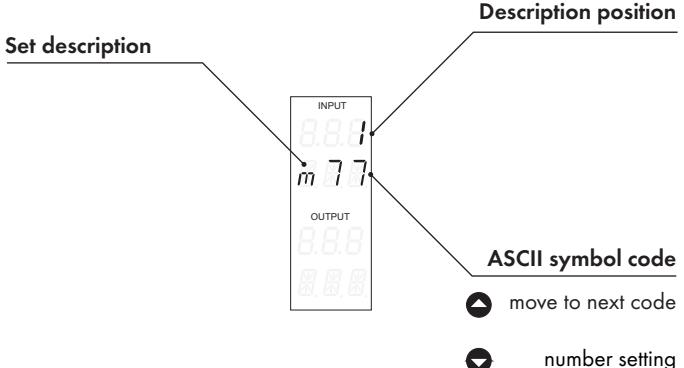

2s  
✖ ➡ CHA ➡ C. A ➡ ➡ ➡ ➡ ➡ ➡ DSA ➡ ➡

DS.A

Parameter	Display	User	Setting	Description
Description of measured values	000	0 ... 95	Besides a standard numeric value this device also offers the possibility of displaying 3 characters representing the measured value. The characters are set via a shifted ASCII code. The upper line on the LCD represents the character being set and the bottom line is used for setting the number that represents the character. The numeric interval is 0...95. <ul style="list-style-type: none"><li>• Description is cancelled by setting 00</li><li>• Range: 0...95</li><li>• <b>RTD</b> <b>T/C</b> <b>DEF</b> °C</li><li>• <b>DC</b> <b>PM</b> <b>DU</b> <b>OHM</b> <b>DEF</b> no characters(00)</li></ul>	

See table of characters on page 89

## 6.2.2a Setting filters in channel B

→ CHA. → → C. B → → FI.B → → MD.B →

Parameter	Display	User	Setting	Description
Selecting filters for input 2	<b>MD.B</b>			Sometimes it may be desirable to appropriately mathematically adjust the measured data before displaying it. The following filters are designed to do just that.
Not applied	<b>OFF</b>			Filter is disabled
Average	<b>AVR.</b>		2 ... 100	Average calculated from measured values • arithmetic average calculated from a specified number of samples taken from C. A • Range: 2..100
Floating filter	<b>FLO.</b>		2 ... 30	Floating filter • floating arithmetic average calculated from a specified number of samples taken from C. A recalculated with every new incoming sample • Range: 2..30
Exponential filter	<b>EXP.</b>		2 ... 100	Exponential filter • First order integration filter with time constant C. A measurement • Range: 2..100
Rounding	<b>RND.</b>		2 ... 100	Rounding of the measured value • it is set by any K. number which determines the display step • e.g. C. A = 2.5 > display 0, 2.5, 5... • Range: 0..999

Setting of Channel B is identical with Channel A

## 6. MENU PROFI

### 6.2.3a Math functions - selection of input

2s CHA. M.FN. I.M.F.

Parameter	Display	User	Description
Input for math function	<i>I.M.F.</i>		Selecting the source of data to be mathematically processed
Not applied	<i>N.D.</i>	Integer	<b>DEF</b>
Channel A	<i>C. A</i>		Calculated from Channel A
Channel A with filter applied	<i>F. A</i>		Calculated from Channel A after being processed by a digital filter
Channel B	<i>C. B</i>		Calculated from Channel B
Channel B with filter applied	<i>F. B</i>		Calculated from Channel B after being processed by a digital filter
Channel A+B	<i>V. K.</i>		Calculated from Channel A and Channel B • This menu item is available only in a 2-input version
Channel A+B with filter applied	<i>V. F.</i>		Calculated from Channel A and Channel B after being processed by a digital filter • This menu item is available only in a 2-input version
Minimum	<i>MIN</i>		Calculated from value Min
Maximum	<i>MAX</i>		Calculated from value Max

### 6.2.3b Math functions

→ ↗ CHA. → ↗ ↗ ↗ M.FN. → ↗ ↗ ↗ M.FN. → ↗ ↗

M.FN.	Parameter	Display	User	Description
M.FN.	Math functions	M.FN		Selection of math functions or of an operation performed on a selected input value/channel
	Polynomial	MUL.		$4x^5 \square Bx^4 \square Cx^3 \square Dx^2 \square Ex \square F$
↗ 1/x		1/M		$\frac{A}{x^5} \square \frac{B}{x^4} \square \frac{C}{x^3} \square \frac{D}{x^2} \square \frac{E}{x} \square F$
↗ Logarithm		LOG		$A \square \ln \frac{Bx \square C}{Dx \square E} \square F$
↗ Exponential		EXP		$A \square e^{\frac{Bx \square C}{Dx \square E}} \square F$
↗ Power		POW		$A \square [Bx \square C]^{\frac{Dx \square E}{F}}$
↗ Root		RT		$A \square \sqrt{\frac{Bx \square C}{Dx \square E}} \square F$
↗ Sin x		SIN		$A \sin^5 x \square B \sin^4 x \square C \sin^3 x \square D \sin^2 x \square E \sin x \square F$
<b>Applies only to the 2-input version and to setting Channel A + Channel B in menu item V. MF.</b>				
↗ Sum of channel values		SUM		$(A \times \text{Ch.A} + B \times \text{Ch.B} + C \times \text{Ch.A} + D \times \text{Ch.B}) \times E + F$
↗ Multiplication of channel values		MUL.		$(A \times \text{Ch.A} \times \text{Ch.B} + B) / (C \times \text{Ch.A} + D \times \text{Ch.B}) + F$
↗ Division of channel values		DIV		$(A \times \text{Ch.A} + B \times \text{Ch.B}) / (C \times \text{Ch.A} + D \times \text{Ch.B}) \times E \times F$

↑	115200 Baud	115			
↑	230400 Baud	230			

### 6.3.2b Setting of data output 1 address

2s  
↑ ↓ → ← OUT. → ↑ ↓ → DAT. → ↑ ↓ → D. 1 → ↑ ↓ → ADR. → ↑ ↓

ADR.		Parameter	Display	User	Setting	Description
ADR.		Device address	00		0 ... 31	Setting of device address on RS485 com. line • Range: 0...31, DEF 00

A.MO.		Parameter	Display	User	Setting	Description
A.MO.		Device MODBUS address	01		1 ... 247	Setting of device address for MODBUS • Range: 1...247, DEF 01

A.PB.		Parameter	Display	User	Setting	Description
A.PB.		Device PROFIBUS address	19		1 ... 127	Setting of device address for PROFIBUS • Range: 1...127, DEF 19

### 6.3.2c Selection of GSD file format of data output 1

OUT. > DAT. > D. 1 > GSD. >

Parameter	Display	User	Description	
GSD format	GSD.		Selection of GSD file format for PROFIBUS	
1 channel	1 K.			
5 channels	5 K.			
9 channels	9 K.			
1 channel + limit	1KL.			
5 channels + limit	5KL.			
9 channels + limit	9KL.			

→ →

### 6.3.2d Selection of communication protocol of data output 1

OUT. > DAT. > D. 1 > PRO. >

Parameter	Display	User	Description	
Data format	PRO.		Data protocol selection	
ASCII	ASCII.		Data protocol ASCII	
Messbus	MBS.		Data protocol DIN Messbus	
MODBUS	MODB.		Data protocol MODBUS - RTU	

→ →

Setting of data output D. 2 is the same as D. 1 setting

## 6. MENU PROFI

### 6.3.3a Selection of input for analogue output 1

2s OUT. A. O. A. 1 I.A.1

I.A.1	Parameter	Display	User	Description
	Input selection	I.R.1		Selecting the source of data from which analogue output 1 will be calculated
	Off	N.O.		Analogue output is disabled
	Channel A	C. A		Analogue output is based on Channel A <span style="float: right;">DEF</span>
	Channel A with filter	F. A		Analogue output is based on Channel A after being processed by digital filter
	Channel B	C. B		Analogue output is based on Channel B
	Channel B with filter	F. B		Analogue output is based on Channel B after being processed by digital filter
	Math function	M.FN		Analogue output is based on Math function
	Value Min.	MIN		Analogue output is based on Value Min
	Value Max.	MAX		Analogue output is based on Value Max.

### 6.3.3b Selection of analogue output 1 type

2s OUT. A. O. A. 1 T.A.1

T.A.1	Parameter	Display	User	Description
	Selection of type	T.R.1		Selection of analogue output 1
	0...20 mA	I.20		
	4...20 mA with indication	E.4T		Indication of a broken current loop and an error message (3 mA) <span style="float: right;">DEF</span>
	4...20 mA with indication	4.T		Indication of a broken current loop (3 mA)
	4...20 mA with indication	E.4		Error message (3 mA)
	4...20 mA	I.4		
	0...5 mA	I.5		
	0...2 V	U.2		
	0...5 V	U.5		
	0...10 V	U.10		
	±10 V	-10		

### 6.3.3c Setting the range of analogue output 1

OUT. > A. O. > A. 1 > A.L.1

	Parameter	Display	User	Setting	Description
A.L.1					Analogue output is isolated and its value corresponds to the value on the display/readout. • setting allows its two endpoints to be assigned to any two points of the whole measuring range (of display)
Beginning of range of AO	<i>RL. 1</i>	-99 ... 999			Assigning the display value to the beginning of range of analogue output 1 • Range: -99...999 •  0
End of range of AO	<i>RL. 1</i>	-99 ... 999			Assigning the display value to the end of range of analogue output 1 • Range: -99...999 •  100

→ →

Setting of analogue outputs A. 2, A. 2 i A. 3 is identical to the setting of output A. 1

### 6.3.4a Display backlight

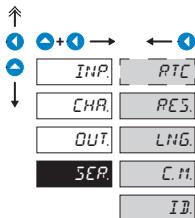

OUT. > DIS. > B. L.

	Parameter	Display	User	Description
B. L.	Backlight	<i>B. L.</i>		Backlight setting
B. L.	Off	<i>NO</i>		Backlight is off
On	<i>YES</i>			Backlight is on
On with timeout	<i>TIME</i>			Backlight is time limited • It is activated by a key stroke for 60 seconds • It is activated automatically every time there is an error message and it is accompanied by green LED flashing

→ →

## 6. MENU PROFI

### 6.4 Setting - SERVICE

Service functions are set in this section of the menu

**RTC** Setting of RTC

**PES.** Factory reset. Restoration of factory calibration

**LNG.** Language version

**C.M.** Setting of new password

**ID.** Device identification

#### 6.4.1 Setting of Real Time Clock - RTC

>  >  >  > **SER.** >  > **HR.** >  > **TIM.** >  > **RTC** >

Parameter	Display	User	Setting	Description
Setting of time	<i>RTC</i>			Setting of time for RTC
RTC				
Hours	<i>HR.</i>		0 ... 23	Setting of hours • Range: 0...99
				→   →
Minutes	<i>MIN.</i>		0 ... 59	Setting of minutes • Range: 0...59
				→   →
Seconds	<i>SEC.</i>		0 ... 59	Setting of seconds • Range: 0...59
				→   →

SER. RTC DAT. YER.

DAT.

Parameter	Display	User	Setting	Description
Setting of date	DAT.			Setting of date for RTC
Year	YER.	0 ... 99		Setting of year • Range: 0...99
Month	MON.	0 ... 12		Setting of month • Range: 0...12
Day	DAT.	0 ... 31		Setting of day • Range: 0...31

## 6.4.2 Factory reset

SER. RES. SET.

SET.

Parameter	Display	User	Description
Reset	SET.		Factory reset
Factory reset	FIR.		Restoration of factory settings • Restores default factory settings relevant to the presently selected Type of input signal, menu items marked with DEF
User reset	USR.		Restoration of user settings • Restoration of last saved setting that was stored in menu item SER./RES./SAV.

SER. RES. SAV.

SAV.

Parameter	Display	User	Description
Save settings	SAV.		Save user settings • By saving this customised setting, this setting can easily be restored in the future
Confirm selection	YES		You will be prompted to confirm your selection before making any changes YES

## 6. MENU PROFI

Change of settings will take effect the next time the menu is entered

actions performed	restoration	
	Calibration	Setting
cancels USER menu rights	✓	✓
deletes the table of order of items in the USER - LIGHT menu	✓	✓
performs LIGHT menu factory reset	✓	✓
deletes data stored in FLASH	✓	✓
cancels all linearization tables	✓	✓
cancels all tares	✓	✓
factory calibration reset	✓	✗
factory setting reset	✗	✓

### 6.4.3 Language selection

2s  
➡ ➡ ➡ ➡ ➡ SER. ➡ ➡ ➡ ➡ LNG. ➡ ➡

Parameter	Display	User	Description
Language menu	LNG.		Language selection
Czech	CZ		Instrument menu is in Czech
English	ENG.		Instrument menu is in English

DEF  
H → (1) A → (1) B → (1)

#### 6.4.4 New access password

**SER.** **C. M.**

Parameter	Display	User Setting	Description
Setting of new password	<i>E. M.</i>		Enables the change of a numeric password which prevents unauthorised user access into LIGHT and PROFI menu When the password is set to 000 (factory default) user is not prompted to enter an access password
Password for LIGHT	<i>PL I.</i>	0 ... 999	Setting of new password for LIGHT menu • Universal password is <b>177</b> • Range: 0...999
Password for PROFI	<i>PPR.</i>	0 ... 999	Setting of new password for PROFI menu • Universal password is <b>915</b> • Range: 0...999

→ →

#### 6.4.5 Device identification

**SER.** **ID.** **YES**

Parameter	Display	User	Description
Self identification	<i>I D.</i>		The device display reads the Device type, SW number, SW version and currently selected input mode • if the SW version starts with a letter instead of a number, it is a customised SW version <b>Example</b> OMX 103 UNI 84-006 • Device type SW number-version

→ →

# SETTING USER

Designed for machine operators

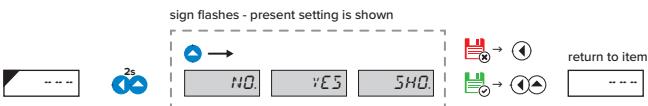

Items are adopted from Profi/Light menu and compiled as needed

Access is not password protected

Structure can be tree like (PROFI) or linear (LIGHT)

## 7.0 Selecting items into "USER" menu

- **USER** menu is designed to be used by an operator who only needs to access quickly few selected menu items (i.e. to set the limit value) while the remaining menu items are inaccessible. This way the basic configuration of the device cannot be altered either knowingly or unknowingly.
- as a default, USER menu contains no items
- menu items marked by **USER** or by inverted triangle L. i
- configuration can be done in either **LIGHT** or **PROFI** menu. **USER** menu adopts the structure of the menu it was created in

- |  |     |  |
|--|-----|--|
|  | NO  | item will not be shown in USER menu                    |
|  | YES | item will be shown in USER menu and can be modified    |
|  | SHO | item will be shown in USER menu but cannot be modified |

## ■ Organising items in “USER” menu

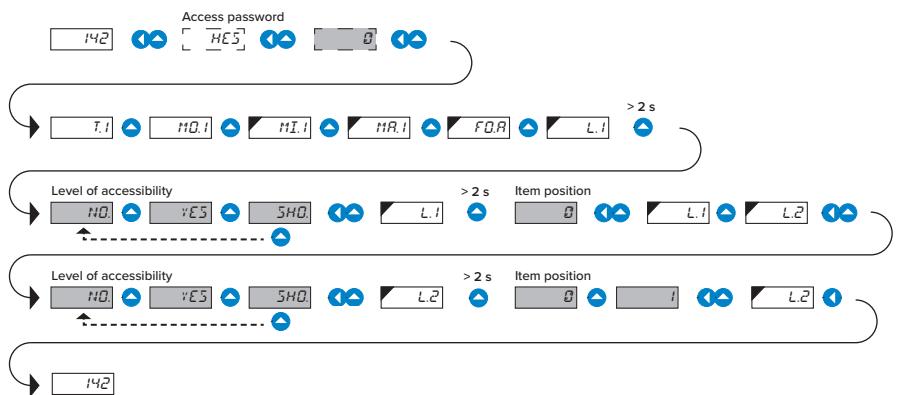

When compiling USER menu out of active LIGHT menu, it is possible to organise the items (max. 10) into an order in which they will be listed in the menu.

## ■ Example of setting the order of items in “USER” menu

Direct access to setting of Limit 1 and Limit 2 from USER menu

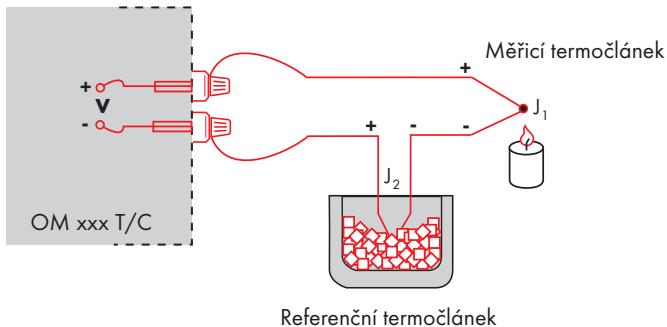

(Example is given for LIGHT menu, but the same procedure can be used also in PROFI menu).

The result of the above sample configuration is that after pressing key the display will read „L.1”. Confirm your selection by pressing + and set the desired limit value, or by pressing key you are taken to „L.2” setting, where you follow the same procedure of setting the desired limit value.  
Configuration is finalised by pressing keys + . This way the latest setting is stored. Return to the measuring mode is by pressing .

### 8.1 Connecting a thermocouple

When the signal convertor is set to measure temperature using a thermocouple, it offers two different ways of reference junctions' temperature measurement.

#### ■ With reference thermocouple

- reference thermocouple may be placed in the same location as the signal convertor or at a place with a stable temperature / in a compensation box
- when using a reference thermocouple, set *CQ.1* in the device's menu to *IN2* or to *E%.2*
- when using a thermostat (a compensation box or a place with a stable temperature), enter into the menu item *CJ.1* its temperature (applicable to setting *CQ.1* in *E%.2*)
- if the reference thermocouple is in the same environment as the signal convertor, set *CQ.1* to *IN2*. When using this method, the measurement of ambient temperature is done by the means of a sensor that is located in the convertor's terminal block.

#### ■ Without reference thermocouple

- inaccuracy caused by the formation of different thermocouples at the terminal / wire junction of the thermocouple is not compensated
- when using this method, set *CQ.1* in the device menu to *IN1* or to *E%.1*
- when a reference thermocouple is not used, the inaccuracy can reach up to 10°C (applicable to setting *CQ.1* in *E%.1*)

This device can communicate via serial line RS232 or RS485. ASCII protocol is used. Communication is carried out in the following format:

ASCII: 8 bit, no parity, one stop bit  
 DIN MessBus: 7 bit, even parity, one stop bit

Baud rate can be set in the device menu. Also the device address can be set in the device menu in the range 0..31. The default setting is: ASCII protocol, rate of 9600 Baud, address 00. The type of serial communication line - RS232 / RS485 - is defined by an output card, which is detected by the device automatically.

You can find the list of commands at [www.orbit.merret.cz/rs](http://www.orbit.merret.cz/rs)

#### DETAILED DESCRIPTION OF COMMUNICATION VIA SERIAL LINE

Action	Transmitted data										
Data solicitation (PC)	#	A	A	<CR>							
Data transmission (instrument)	>	R	<SP>	D	D	D	D	D	(D)	(D)	<CR>
Confirmation of command (instrument) - OK	!	A	A	<CR>							
Confirmation of command (instrument) - Bad	?	A	A	<CR>							
Instrument identification	#	A	A	1Y	<CR>						
HW identification	#	A	A	1Z	<CR>						

#### LEGEND

Sign	Range	Description
#	35	23 <sub>H</sub>
		Beginning of command
A	A	0..31
		Two characters of instrument address (sent in ASCII - tens and units, e.g. "01", "99" universal)
<CR>	13	0D <sub>H</sub>
		Carriage return
<SP>	32	20 <sub>H</sub>
		Space
Č, P		Number and command - command code
D		Data - usually characters "0"..."9", "-", ".", (D) - dp. and (-) may extend data
R	30 <sub>H</sub> ...3F <sub>H</sub>	Relay and Tare status
!	33	21 <sub>H</sub>
		Positive confirmation of command (ok)
?	63	3F <sub>H</sub>
		Negative confirmation of command (bad)
>	62	3E <sub>H</sub>
		Beginning of transmitted data
<STX>	2	02 <sub>H</sub>
		Beginning of text
<ETX>	3	03 <sub>H</sub>
		End of text
<SADR>		adresa +60 <sub>H</sub>
		Prompt to send from an address
<EADR>		adresa +40 <sub>H</sub>
		Prompt to accept a command at an address
<ENQ>	5	05 <sub>H</sub>
		Termination of address
<DLE>1	16 49	10 <sub>H</sub> 31 <sub>H</sub>
		Confirmation of correct statement
<NAK>	21	15 <sub>H</sub>
		Confirmation of error statement
<BCC>		Check sum -XOR

#### RELAY, TARE

Sign	Relay 1	Relay 2	Tare	action of relay 3/4
P	0	0	0	0
Q	1	0	0	0
R	0	1	0	0
S	1	1	0	0
T	0	0	1	0
U	1	0	1	0
V	0	1	1	0
W	1	1	1	0
p	0	0	0	1
q	1	0	0	1
r	0	1	0	1
s	1	1	0	1
t	0	0	1	1
u	1	0	1	1
v	0	1	1	1
w	1	1	1	1

Relay status can be read by command #AA6X <CR>.

The instrument immediately returns the value in the format >HH <CR>, where HH is value in HEX format and range 00H...FFH. The lowest bit stands for „Relay 1“, the highest for „Relay 8“

### 10.1 Table of error statements

Error Code	Cause	Remedy
E. 2	Number is too small (large negative) to be displayed	change setting of decimal point, setting of channel constant
E. 3	Number is too large to be displayed	change setting of decimal point, setting of channel constant
E. 4	Number is outside the table range (low end)	create a new entry for a value lower than the current lowest entry, change input setting (of channel constant)
E. 5	Number is outside the table range (high end)	create a new entry for a value higher than the current highest entry, change input setting (of channel constant)
E. 6	Input signal is lower than the permitted input range	change input signal value or input range setting
E. 7	Input signal is higher than the permitted input range	change input signal value or input range setting
E. 8	Hardware error. A part of the instrument is not working properly	send the instrument for repair
E. 9	Data in EEPROM corrupted	perform factory reset. If this message keeps coming up, send the unit for repair
E. 10	Change of associated item in the menu, EEPROM data out of range	change setting of associated items (where change in one creates changes in others), perform factory reset, if problem persists, send back for repair
E. 11	Memory was empty (presetting had been implemented)	If this message keeps coming up, send the unit for repair. Factory calibrations may be corrupt
E. 12	Input circuit disconnected DC-U, PM-4/20, T/C, DU	check wire connection
E. 13	Output current loop disconnected	check wire connection

## 11.1 Table of characters

The instrument allows to add two descriptive characters to the standard numeric formats (at the expense of the number of displayed digits). The setting is performed by means of a shifted ASCII code. Numeric value of the character equals the

sum of the numbers on both axes of the table.

Description is cancelled by entering characters with code 00

Example: How to set "mA": Locate lower case "m". It is where axis leading to 72 a 5 intersect.  $72 + 5 = 77$ . Enter 77. Similarly, enter 33 for "A". For space "", enter 00.

	0	1	2	3	4	5	6	7		0	1	2	3	4	5	6	7
0	ñ	"	£	\$	%	đ	'		0	!	"	#	\$	%	&	'	
8	:	)	*	+	,	-	/		8	(	)	*	+	,	-	.	
16	ø	l	2	3	4	5	6	7	16	0	1	2	3	4	5	6	7
24	8	9	ñ	₩	(	)	-	?	24	8	9	VA	Vf	<	=	>	?
32	C	R	B	C	D	E	F	G	32	@	A	B	C	D	E	F	G
40	H	I	J	K	L	M	N	O	40	H	I	J	K	L	M	N	O
48	P	Q	R	S	T	U	V	W	48	P	Q	R	S	T	U	V	W
56	₩	¥	Z	C	‘	’	”	-	56	X	Y	Z	[	\	^	_	
64	'	a	b	c	d	e	F	g	64	'	a	b	c	d	e	f	g
